The scheme by utilising a holistic risk management strategy will endeavour to manage risks associated with investing in equity markets. The scheme has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks

- i. Quality Risk Risk of investing in unsustainable / weak companies.
- ii. Price Risk Risk of overpaying for a company.

- iv. Volatility Risk Volatility in price due to company or portfolio specific factors.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.

Scheme specific Risk Factors are summarized below:

The scheme carries risks associated with investing in equities, fixed income securities, securitized debt, derivatives.

Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/ policies of the government, taxation laws and political, economic or other developments.

Equity and equity related instruments are volatile by nature.

Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.

The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

Please refer to the SID for further details.

Risk Management

The investment team of the AMC will in respect of equity component, the Scheme would invest in a diversified portfolio of equity and equity related securities which would help alleviate the sector/market capitalization related concentration risk.

The AMC has experienced investment professionals to help limit investment universe to carefully selected high quality businesses.

The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

The AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. These would be periodically evaluated. The scheme will also use derivatives and other hedging instruments, as may be permitted by SEBI and RBI, from time to time, to protect the value of the portfolio. The risk control process involves identifying & measuring risks through various risk measurement tools.
