INVESTMENT STRATEGY:

The scheme aims to provide long term capital growth by investing in a well-diversified portfolio of equity and equity related securities. The fund manager proposes to concentrate on business and economic fundamentals driven by in-depth research techniques and employing the full potential of the research team at the AMC. The stock selection process proposed to be adopted is generally a bottom-up approach seeking to identify companies with long term sustainable competitive advantage (as this is one of the key factors responsible for withstanding competitive pressures and does not allow rivals to eat up any excess profits earned by a successful business). The fund would also use a top down discipline for risk control by ensuring representation of companies from select sectors.

As part of the stock selection process the fund proposes to study parameters like the price-to-book (P/B) ratio, price-to-earning (P/E) ratio, dividend yields (D/Y) of companies within its researched universe and try to identify companies with low P/B and P/E ratios and which have historically declared dividends on a consistent basis and have reasonable certainty of declaring attractive dividends in the future. The fund would also look into other quantitative parameters like Return on Equity (ROE) and Return on Capital Employed (ROCE) to identify stocks which may be available at more favourable valuations when compared with peer group and stocks in applicable benchmark. Such stocks may have some degree of an overlap to stocks picked by following the value style of investing or are part of the mid and small cap universe. To the extent that the portfolio comprises of mid and small cap stocks, the fund would optimally diversify to mitigate liquidity and concentration risks. The fund does not intend to restrict to only value stocks. The fund may also look at stocks which have in the recent past demonstrated significant price appreciation as a result of improved earnings growth or due to some other reasons.

Notwithstanding above criteria, the fund would also invest in companies in which the above quantitative factors may not be a correct indicator of the intrinsic value of the stock. For example a company which has land as an asset in its balance sheet at historical cost, the P/B may not be a correct indicator of the worth of the stock. Another such example is that of a company undergoing special situation like a merger or a de-merger, debt structuring, buy-back or some other special situation. The fund would also look at contra picks to identify companies that are currently out of favor, overlooked or neglected due to temporary fallacies like poor results, failure with regards to the product launch, factor affecting the industry, etc. However, these companies may be fundamentally strong but market may have failed to recognize their true potential. The scheme may invest in such undervalued companies to take advantage of price appreciation. The fund proposes to take long term call on stocks, which in the opinion of the fund manager offer better return over the maturity profile of the fund.

As and when the fund manager is of the view that a specific investment has met its desired objective and the investment is liquidated, the proceeds may be distributed by way of dividend, subject to the availability of distributable surplus.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unit holders' interest.

The Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds, provided it is in conformity with the investment objective of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments. As per the SEBI Regulations, such inter scheme investments shall not exceed 5% of the Net Asset Value of the Fund.

At present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.

The Fund may also invest in depository receipts including American Depository Receipts (ADRs) and Global Depository Receipts (GDRs).

The Scheme may also invest in debt and money market instruments, in compliance with Regulations.

The Scheme may invest in derivatives to engage in permitted currency hedging transactions with an intention to reduce exchange rate fluctuations between the currency of the Scheme (INR) and the foreign currency exposure.

RISK PROFILE OF THE SCHEME:

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors summarised below.

Scheme Specific Risk Factors and Risk Management Strategies:

In general, investment in the scheme may be affected by risks associated with equities and fixed income securities.

The securities in the Scheme may be predominantly characterized by a stock selection where more emphasis is on value opportunity and less on earnings growth. There could be time Periods when securities of this nature may underperform relative to other stocks in the market. Value stocks are stocks that are trading below its intrinsic or relative value which is undiscovered by the market and may take time for the market participants to identify its true potential. Hence it may take a long period of time for value of that stock to be unlocked. This could impact performance of the scheme.

Value opportunities are generally available in the mid and small cap space; wherein majority of the companies are under-researched. Due to lack of coverage of these stocks, they usually are more volatile and illiquid than their large cap peers. Thus, relative to larger, more liquid stocks, investing in value stocks, involves potentially greater volatility and risk.

The Scheme retains the flexibility to hold from time to time relatively more concentrated investments in a few sectors as compared to plain diversified equity funds. This may make the Scheme vulnerable to factors that may affect these sectors in specific and may be subject to a greater level of market risk leading to increased volatility in the Scheme's NAV.

The scheme being close ended its units would be listed on a stock exchange. The scheme does not guarantee a liquid and active secondary market for its units on the stock exchange and hence the units may trade at a premium or discount to its NAV.

Risks associated with transaction in units through stock exchange mechanism

Units of the Schemes will be traded on BSE or any other recognised stock exchange. Debit/Credit of Units in investor's demat account on any Business Day will depend upon the order processing/settlement by BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange shall be governed by the operating guidelines and directives issued by BSE or such other recognised exchange in this regard.

Risk associated with close ended Schemes:

A close ended Scheme endeavors to achieve the desired returns only at the scheduled maturity of the Scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode, if they have opted to hold Units in a demat form, by mentioning their demat details on the NFO application form. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the desired returns.

Although the securities in the portfolio will have high market liquidity, there is a possibility that market liquidity could get impacted on account of company/ sector/general market related events and there could be a price impact at maturity while liquidating the portfolio.

Risk associated with Listed Schemes:

Investors who hold units in demat form and wish to exit/redeem may do so through the stock exchange mode. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme on the exchange may not get the desired returns.

Absence of Prior Active Market

Although the scheme will be listed on stock exchange, there can be no assurance that an active secondary market will develop or be maintained.

Risk management strategies: The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The risk control process involves identifying θ measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in equity and debt Securities designed risk management strategies, which are embedded in the investment process to manage such risks.

| Risk and Description | Risk mitigants / management strategy | | | | | | | | |
|--|---|--|--|--|--|--|--|--|--|
| Risks associated v | with Equity investments | | | | | | | | |
| Concentration Risk: Concentration risk represents the probability of loss arising from heavily lopsided exposure to a particular group of sectors or securities. | The Scheme will try and mitigate this risk by investing in sufficiently large number of companies so as to maintain optimum diversification and keep stock-specific/sector specific concentration risk relatively low. | | | | | | | | |
| Market Risk: The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme. | Market risk is a risk which is inherent to an equity scheme. The Scheme may use derivatives to limit this risk. | | | | | | | | |
| Liquidity risk: The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests. | The liquidity of stocks that the fund invests into could be relatively low. The Fund is a Close Ended Fund and as such daily liquidity requirements are inherently not present. The fund will try to maintain a proper asset-liability match to ensure redemption / maturity payments are made on time and not affected by illiquidity of the underlying stocks. | | | | | | | | |
| Derivatives Risk As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives since derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. | Derivatives will be used for the purpose of hedging/portfolio balancing purposes or to improve performance and manage risk efficiently. Derivatives will be used in the form of Index Options, Index Futures, Stock Options and Stock Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. No OTC contracts will be entered into. | | | | | | | | |

| Risks associate | d Debt investments |
|---|---|
| Risks and description | Risk mitigation strategy |
| Market Risk/ Interest Rate Risk: As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV. | The scheme will undertake the active portfolio management as per the investment objective to reduce the market risk. In a rising interest rates scenario, the scheme will increase its investment in money market securities whereas if the interest rates are expected to fall, the allocation to debt securities with longer maturity will be increased thereby mitigating risk to that extent. |
| Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). | The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be relatively high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimize liquidity risk by investing in securities having a liquid market. |
| Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). | Management analysis will be used for identifying company specific risks. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets. |
| Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. | Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value. |
| Derivatives Risk: As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instru- | Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines. |

ment but also of the derivative itself.

There is the possibility that a loss

may be sustained by the portfolio as

a result of the failure of another party

(usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks

in using derivatives include the risk

of mis-pricing or improper valuation of derivatives and the inability of de-

rivatives to correlate perfectly with underlying assets, rates and indices.

| Currency Risk: The Schemes will invest in foreign securities as permitted by the concerned regulatory authorities in India. Since the assets will be invested in securities denominated in foreign currency (US\$) ,the INR equivalent of the net assets, distributions and income may be adversely affected by changes / fluctuations in the value of the foreign currencies relative to the INR. | The scheme subject to applicable regulations shall have the option to enter into forward contracts for the purposes of hedging against the foreign exchange fluctuations. The Schemes may employ various measures (as permitted by SEBI/RBI) including but not restricted to currency hedging (such as currency options and forward currency exchange contracts, currency futures, written call options and purchased put options on currencies and currency swaps), to manage foreign exchange movements arising out of investment in foreign securities. All currency derivatives trade, if any will be done only through the stock exchange platform. |

XVI. TRIGGER ON MATURITY OF THE SCHEME:

- Trigger facility will switch all the units in the target scheme within the respective Folio Number
 of the investor.
- 2. Any of the open ended schemes of ICICI Prudential Mutual Fund can be a target scheme.
- For Trigger facility to happen the minimum purchase/redemption criteria should be met else the trigger will not be effected.
- Trigger facility on each scheme will require a separate/independent Trigger request form to be filled. If an investor holds similar schemes in two folios, they will have to register separately for it mentioning the folio number.
- Target scheme where units will be switched, if option/sub-options are not selected, it will be switched to the default option (available under the Target Schemes).
- Switch will be implemented on the day the Trigger condition is satisfied. The Trigger is a one time operation and will cease once it is exercised.
- Once switch is done exercising Trigger option, the same will not be reversed whatsoever and it will be final and binding.
- If Trigger facility is not activated and/or implemented due to reasons which are beyond the control of ICICI Prudential AMC Ltd. (the AMC), the AMC will not be responsible. Trigger facility is only a facility extended by the AMC for the convenience of the unit holders and does not form part of any scheme/fund objectives.
- AMC reserves the right to amend/terminate this facility at any time, keeping in view business/ operational exigencies and the same shall be in the best interest of the investors.
- 10. The investor is being provided a facility to give the switch request from the close ended funds, much in advance of the maturity of the fund. At a future date changes can arise in the target scheme which can prevent the AMC from processing the switch request. In such cases the switch request would be considered NULL & VOID and the investor would have to re-submit the Trigger request. Few examples of such changes are
 - a. Change in fundamental attribute of the target Scheme.
 - b. Merger of the target scheme into any other scheme.
 - c. Any change in the target scheme specifications which restricts the AMC from accepting the switch request. For example : Maximum and Minimum amount size.
 - d. When Target Scheme has stopped accepting fresh subscriptions in the Scheme
- In case folio consolidation is requested by the investor, the existing Trigger request would be considered Null & Void.
- 12. The investor would be allowed to re-register a fresh Trigger request as per existing process.
- 13. In case of change of broker or change of investment status as "direct" after closing of New Fund Offer, the new broker code would be updated for existing investments and for existing Trigger request.
- Conversion of physical unit to demat mode will nullify any existing / future Trigger request and the request cannot be re-submitted.
- 15. Trigger facility will be effected only when the terms and conditions of the said facility is fulfilled.
- 16. In case of Trigger facility, the switch into the open ended scheme will be subject to applicable cut off timings provisions.
