Investment Objective

Asset allocation pattern

The asset allocation pattern for the scheme under normal circumstances is detailed in the table below:

| Instrument | Indicative Allocation (% of total assets) | | Risk Profile |
|---|--|---------|---------------|
| | Minimum | Maximum | |
| Equity & Equity related instruments of Midcap Companies | 65% | 100% | High |
| Debt and Money Market instruments | 0% | 35% | Low to Medium |

Debt and money market instruments may include securitized debt up to 10% of the net assets of the Scheme. The mutual fund shall comply with the applicable provisions of SEBI Circular dated January 7, 2014 and all other guidelines issued by SEBI, Exchanges and other Governmental authorities with respect to transactions in securitized debt instruments.

The scheme may invest up to 50% of Net Assets of Scheme into equity derivatives instruments. Investment in derivatives shall be for hedging, portfolio balancing and such other purposes as maybe permitted from time to time.

The Scheme will not invest in ADRs / GDRs, foreign securities.

The Scheme will invest in equity and equity related instruments of those companies that are either constituent of Nifty Free Float Midcap 100 Index (benchmark) or companies that have a market capitalization between the highest and the lowest market capitalization of Nifty Free Float Midcap 100 Index (Benchmark).

These companies may or may not be a constituent of the benchmark Index. Initial Public Offerings of companies, the market capitalization of which, on listing, would be estimated to meet the above mentioned criteria, will also qualify as midcap companies.

This market capitalization range for midcap companies will be determined at the end of every calendar quarter and will be applicable for all investments. The portfolio will be reviewed at every calendar quarter end. In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will rebalance the same within 30 days.

The scheme may also enter into repurchase (repo) agreement and reverse repurchase agreement in government securities held by it as per the guidelines and regulations applicable to such transactions. The scheme will not invest in Repo in Corporate Debt Securities.

The scheme will not write options or purchase instruments with embedded written options. The total exposure related to option premium paid will not exceed 20% of the net assets of the scheme.

Securities lending in the scheme will be in accordance with the guidelines on securities lending and borrowing scheme and modifications issued by SEBI from time to time such as circular no. MRD/DoP/SE/Dep/Cir-14/2007 dated December 20, 2007 circular no. MRD/DoP/SE/Cir-31/2008 dated October 31, 2008, circular no. MRD/DoP/SE/Dep/Cir- 01/2010 dated January 06, 2010, circular no. The cumulative gross exposure under the Scheme through Equity, Money market instruments, debt instruments and derivatives positions, will not exceed 100% of the net assets of the scheme.

Subject to the Regulations, the asset allocation pattern indicated above may change from time to time keeping in view market conditions and investment opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the asset allocation pattern will be for short term and defensive considerations.

In the event of asset allocation falling outside the limits specified in the asset allocation table, the fund manager will rebalance the same within 30 days from the date of deviation. If the rebalancing couldn't be completed within the 30 days, the details of such instances will be reported to the Trustees for taking necessary remedial measures. Though every endeavor will be made to achieve the objectives of the Scheme, the AMC / Sponsors / Trustees do not guarantee that the investment objectives of the Scheme will be achieved.

No guaranteed returns are being offered under the scheme.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

- The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document & Statement of Additional Information.
- Trading volumes and settlement periods may inherently restrict the liquidity of the scheme's investments. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.
- The Mutual Fund is not assuring any dividend nor is it assuring that it will make any dividend distributions. All dividend distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme and will be at the discretion of the AMC.
- Redemption by the unit holders due to change in the fundamental attributes of the scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, their directors or their employees shall not be liable for any tax consequences that may arise.
- Different types of securities in which the Scheme / Plans would invest as given in the SID carry different levels of risk. Accordingly the Scheme's / Plan's risk may increase or decrease depending upon the investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- The tax benefits described in the SID are as available under the present taxation laws and are available subject to relevant condition. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Investors and Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As in the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of the investment in the Scheme(s) will endure indefinitely. In view of the individual nature of tax consequences, each Investor / Unit holder is advised to consult his / her / its own professional tax advisor.
- Risks associated with investment in equity and equity related instruments**
Investments in equity and equity related instruments like stocks, convertibles, warrants, derivatives etc carry both systematic (macro-economic) and company-specific risks. These instruments are exposed to and can be impacted by adverse changes in interest rates, currency rates, inflation, liquidity (trading volumes and settlement) as well as company specific risks like corporate governance issues, changes in technology, financial distress etc.
Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme(s). Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
To mitigate risks associated with investments in equity and equity related instruments the AMC will ensure that the portfolio is adequately diversified. The Fund Manager will invest in companies / sectors identified through a robust in-house research process for its investments merits – competitive position, earnings growth, management quality etc – and will be monitored on an ongoing basis to minimize company / sector specific risks. The Fund Manager may also use derivatives tools as appropriate to hedge against market / company specific risks.
It may be noted that this Scheme intends to invest predominantly in Equity and Equity related instruments of Midcap Companies. Stocks of Midcap companies are more volatile and less liquid than the stocks of large cap companies. Over a period of time, stocks of mid and large cap companies have demonstrated different level of volatility and returns. And no single market cap category has consistently outperformed the other.
- Risks associated with investments in Debt and Money market Instruments**
Credit risk: This risk arises due to any uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.
The AMC seeks to manage credit risk by restricting investments only to investment grade securities. Regular review of the issuer profile to monitor and evaluate the credit quality of the issuer will be carried out.

Interest Rate risk: This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate / depreciate if the interest rates fall / rise.

Interest rate risk mitigation will be through active duration management at the portfolio level through regular monitoring of the interest rate environment in the economy.

Liquidity risk: The liquidity of a bond may change depending on market conditions leading to changes in the liquidity premium linked to the price of the bond. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio.

The AMC will endeavour to mitigate liquidity risk by mapping investor profile and potential redemption expectations into the portfolio construction to allow the scheme to liquidate assets without significantly impacting portfolio returns.

Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.

The AMC will endeavor to manage this risk by diversifying investments in instruments with appropriate maturity baskets.

9. **Risks associated with Investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

There are certain risks inherent in derivatives. These are

Price Risk: Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.

Default Risk: This is the risk that losses will be incurred due to default by counter party. This is also known as credit risk or counterparty risk.

Basis Risk - This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.

Limitations on upside: Derivatives when used as hedging tool can also limit the profits from a genuine investment transaction.

Liquidity risk: pertains to how saleable a security is in the market. All securities / instruments irrespective of whether they are equity, bonds or derivatives may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

The AMC will monitor the overall economic and credit environment including the systemic liquidity on a regular basis and the outlook will be integrated into the risk control and monitoring of the Scheme to control the risk emanating from derivative investments.

10. **Risks associated with Short Selling**

When the Fund engages in short selling, it will borrow the security from a third party with the understanding that the security will be returned at a later date as and when required by the lender. Short selling a security demonstrates a negative view on a particular security (i.e. an expectation that the stock price will fall in future). However, there is a risk that the stock price may go up contrary to expectations which will result in losses to the Scheme. The losses will be realized to the Scheme if the Scheme may be forced to buy the shares in the market at the prevailing higher market price (than the price at which sold initially) to return the security to the lender if so required by the lender

11. **Risks associated with Securities Lending**

There are risks inherent to securities lending, including the risk of failure or bankruptcy of the counter party, leading to non-compliance with the terms of the agreement by the counterparty. Such failure can result in the possible loss of rights to the collateral, the inability of the counterparty to return the securities deposited by the lender and the possible loss of any corporate benefits accruing thereon.

12. **Risks associated with investing in unrated securities**

Investing in unrated securities will be riskier compared to investment in rated instruments due to non availability of third party assessment on the repaying capability of the issuer. Any investment in unrated securities will be carried out only after obtaining the general approval from Board of Trustees and Board of AMC. The Mutual Fund will carry out internal rating exercise for all unrated instruments in which the Fund Manager plans to make investments and assign a proxy rating.

Investments in unrated instruments will only be made in instruments with proxy rating of A1+ / AA+ or above.

13. **Risks associated with investing in Securitized Debt**

Securitized Debt is a financial instrument (bond) whose interest and principal payments are backed by an underlying cash flow from another asset. The risks associated with investing in such instruments are:

Limited Recourse: The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.

Delinquency and Credit Risk: Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly Investor Payouts to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle / Asset. However many factors may affect, delay or prevent the repossession of such Vehicle / Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle / Asset may be sold may be lower than the amount due from that Obligor.

Risks due to possible prepayments: Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.

Bankruptcy of the Originator or Seller: If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

Liquidity risk: There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.

The Scheme offers the following Plans for investment-

- a) Regular Plan
- b) Direct Plan

As per SEBI circular no CIR/IMD/DF/21/2012 dated September 13, 2012, a separate plan (Direct Plan) is provided to the investors for direct investments, i.e., investments not routed through a distributor.
