KEY INFORMATION MEMORANDUM

Investment Objective	trac	fund seeks to provide returns that, before expenses, closely co king errors.	·		-	
		<u>claimer:</u> There can be no assurance or guarantee that the investr	ment objective	e of the Schem	e would be ac	chieved.
Asset Allocation	The asset allocation under the scheme will be as follows:					
	Instrument			Indicative A (% of Net	Asset)	Risk Profile
	<u> </u>		1	Maximum	Minimum	
	<u> </u>	urities of companies constituting S & P BSE Sensex Index, the Under		95	100	Medium to High
		h and Cash Equivalents, Money Market Instruments with resic exceeding 91 days, liquid and money market mutual fund sch		0	5	Low to Medium
	Money Market Instruments include commercial papers, commercial bills, treasury bills, and Government securities having a unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, CBLOs and any other like instrument as specified by SEBI / RBI from time to time.					
	The	Scheme does not intend to invest in derivatives, foreign securit	ties and will no	t engage in seo	curities lendir	ng and short selling
Investment Strategy of the Scheme	The Scheme will track its Underlying Index and will use a "passive" or indexing approach to endeavor to achieve sche investment objective. The scheme will neither try to beat the index it tracks nor take active approach in times when markets to be over/under valued. The AMC does not make any judgments about the investment merit of a particular stock or a parti industry segment nor will it attempt to apply any economic, financial or market analysis. Since the scheme is an exchange tr fund, the scheme will only invest in the security constituting the underlying index.				when markets see stock or a particul	
	Sind	ce the scheme is an exchange traded fund, it will endeavor that a	at no point of t	ime the schem	e will deviate	from the index.
Risk Profile of the Scheme & Risk management strategies		ual Fund Units involve investment risks including the possible lo ors before investment. Scheme specific Risk Factors are summ			he SID carefu	lly for details on ris
	 The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down. 					
	2) The Scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prome to price fluctuations on a daily basis due to both micro and macro factors. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme(s) to make intended securities' purchases due to settlement problems could cause the Scheme(s) to miss certain investment opportunities.					
	3) While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.					
	4) As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.					
	5) Absence of Prior Active Market: Although the Scheme is listed on BSE, there can be no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the Units of the Scheme would be infrequent.					
	6) Units of the Scheme May Trade at Prices Other than NAV: The Units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of the holdings of the Scheme. The trading prices of the Units of the Scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Scheme. However, given that Units of the Scheme can be created and redeemed in Creation Units directly with the Fund, it is expected that large discounts or premiums to the NAV of Units of the Scheme will not sustain due to arbitrage opportunity available.					
	The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt and equity markets. The risk control process involves identifying & measuring the risk through various risk measurement tools. The Fund has identified following risk management strategies, which are embedded in the investment process to manage such risks.

Risk Profile of the Scheme & Risk management strategies			
(Contd.,)	Risk Description Risk Mitigants/Management Strategy		
	Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation Yield-To-Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.	
	Credit Risk Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.	A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets.	
	Reinvestment Risk This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.	
	Risks associated with Equity investment		
	Risk Description	Risk Mitigants/Management Strategy	
	Market Risk The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.	Market risk is a risk which is inherent to an equity scheme. The fund seeks to control such risk by investing in such stocks having strong fundamentals, sound financial strength and superior quality of management and highly liquid papers.	
	Liquidity risk The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.	The fund seeks to control such risk by investing in such stocks having strong fundamentals, sound financial strength and superior quality of management and highly liquid papers. The fund will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying stocks.
