(i) CREDIT EVALUATION POLICY FOR INVESTMENTS IN DEBT SECURITIES

Credit evaluation is a continuous process. It applies not only for issuers where investments are being evaluated for the first time but also for those where we already have credit exposures.

In a detailed credit evaluation process, the following aspects are covered.

- An in-depth review of the sector in which company operates. In this process, research team also measures the micro and macro risks associated with the sector and its possible impact on the overall business environment of the issuer. In addition, issuer's market position is evaluated vis-à-vis competition.
- 2. Issuer analysis involves both qualitative and quantitative aspects.
 - Qualitative analysis is related to quality of management, corporate governance, promoter background, parents support etc. Any synergy / cross dependence with any of the other promoter companies is also scrutinized.
 - Quantitative analysis is related with balance sheet management, profitability indicators, ratio analysis, capex programmes, growth plans, leverage and cash management policy etc.
- 3. The due diligence process involves both primary and secondary sources for research.
 - Secondary sources of information like publicly available data including annual reports and other public filings, rating and other research reports, industry research reports are studied in detail.
 - b. Primary research activities like direct interaction with the issuer at various levels, interaction with the rating agencies, the company's bankers, competitors in the industry and stock market participants (market intelligence), is given a very high weightage.
- 4. Both for plain vanilla transactions and especially for structured transactions, legal due diligence is an integral part of the overall risk evaluation policy. Depending on the scope and complexity of transactions both internal as well as external legal exercises are undertaken.

Based on the above analysis, the credit research team presents a case for investing

/ avoiding investments for any new issuer / structure. Post these discussions formal proposals are prepared for issuers / structures where limits are being sought.

The approval for such limits is sought, based on certain criterion that is laid out as part of the investment policy. Depending on the rating, tenure, and proposed exposures, approvals are taken at the Head of Fixed Income / Investment Committee / Board levels.

As mentioned earlier, credit evaluation is a continuous exercise. For all issuers / structures where we have current exposures regular evaluation is carried out on a periodic basis. The periodicity of such evaluation depends on the exposure, credit comfort on the said issuer / structure and the overall credit environment.

Apart from regular credit updates both internally and at the Investment Committee levels, the board is also appraised on a periodic basis, on all the credit exposures, their performance and the credit department's views on them going forward.

(II) LIST OF SECTORS WHERE RNLAM/ RMF WOULD NOT BE INVESTING

The scheme will not invest in Gems & Jewellery sector and airline sector.

 instruments of desired credit quality are not available.
- Further, the above allocation may vary during the tenure of the scheme. Some

In case of such deviations, the scheme may invest in Bank CDs (A1+ or equivalents) / CBLOs/ Reverse Repos (excluding repo in corporate bonds)/ G-sec / T-Bills / Liquid schemes. The scheme shall not invest more than 10% of its NAV in unrated debt instruments issued by a single issuer and the total investment in unrated instruments shall not exceed 25% of the NAV of the scheme.
- 6. RNLAM will ensure that total exposure of the scheme in a particular sector (excluding investments in Bank CDs, short term deposits of scheduled commercial banks, CBLO, G-Secs, T-Bills and AAA rated securities issued by Public Financial Institutions and Public Sector Banks and such other instruments if any,as may be specified by SEBI from time to time) shall not exceed 25% or such other percentage of the net assets of the scheme, as prescribed by SEBI from time to time.

An additional exposure to financial services sector (over and above the limit of 25%) not exceeding 10% of the net assets of the scheme shall be allowed by way of increase in exposure to Housing Finance Companies (HFCs) rated AA and above and registered with National Housing Bank (NHB). However, such total investment/ exposure in HFCs shall not exceed 25% of the net assets of the scheme or such other percentage of the net assets of the scheme, as prescribed by SEBI from time to time.

Further, to clarify please note that all the above mentioned provisions and investments made in line with the above mentioned circumstances/variations are independent of this scenario (25% sector limit and exceptions on the same as detailed in point No. 6).

7. The range as indicated in the intended portfolio allocation depending on the risk return profile of the portfolio and subject to the availability of the securities, the fund manager may increase the allocation for AAA rated securities, while ensuring range of other securities is proportionately adjusted.

It may be noted that the intended portfolio allocation will be determined at the time of launch of of the scheme whereas the final portfolio for the purpose of determining deviations, if any, will be considered after 30 days from the allotment. Basis the same, RNLAM will report in the next meeting of Board of Directors of Reliance Nippon Life Asset Management Limited (RNLAM) (formerly Reliance Capital Asset Management Limited) and Reliance Capital Trustee Co Limited the publicized percentage allocation and final portfolio.

 The aforesaid limits shall not be applicable to term deposits placed as margins for trading in cash and derivatives market.

WHAT ARE THE INVESTMENT STRATEGIES?

The fund management team will endeavor to maintain a consistent performance in the scheme by maintaining a balance between safety, liquidity and profitability aspects of various investments. The fund manager will try to achieve an optimal risk return balance for management of the fixed income portfolios.

The investments in debt instruments carry various risks like interest rate risk, liquidity risk, default risk, purchasing power risk etc. While they cannot be done away with, they can be minimized by diversification and effective use of hedging techniques.

The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets.

Investment views / decisions will be taken on the basis of the following parameters:

- 1. Prevailing interest rate scenario
- 2. Quality of the security / instrument (including the financial health of the issuer)
- 3. Maturity profile of the instrument
- 4. Liquidity of the security
- 5. Growth prospects of the company / industry
- 6. Any other factors in the opinion of the fund management team

Risk Mitigation Factor /Control:

The Fund Management proposes to use analytic risk management tools like VAR / convexity/ modified duration for effective portfolio management.

RISK PROFILE OF THE SCHEME:

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

i) Schemes investing in Bonds:

Investors of the Scheme should be aware of the risks generally associated with investments in the fixed income and money market instruments. Given below are some of the common risks associated with investments in fixed income and money market securities.

- a. Interest Rate Risk: As with all debt securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV.
- b. Liquidity or Marketability Risk: This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.
- c. Credit Risk: Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.
- d. Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows.

(ii) Risks associated with Investing in Derivatives

- As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

(iii) Risk Associated with Securitised Debt

As with any other debt instrument, the following risk factors have to be taken into consideration while investing in PTCs:

a. Credit Risk

Since most of the PTCs are drawn from a cherry picked pool of underlying assets, the risk of delay / default due to poor credit quality is low. Further more most of the PTCs enjoy additional cashflow coverage in terms of subordination by another lower class of PTCs or in terms of excess cash collateralization.

b. Liquidity Risk

Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

c. Price Risk / Interest Rate Risk

The price risk of these instruments shall be in line with the maturity / duration of such instruments. However given the fact that these instruments will have a maturity profile upto 2 years, the duration risk is relatively less.

Domestic Securitised debt can have different underlying assets and these assets have different risk characteristics. These may be as given in the following example:

Security 1 - Backed by receivables of personal loans originated by XYZ Bank Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds.

Security 2 - Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from ABC Bank Limited

(iv) Risks associated with Listing of Units

Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.

There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.

(V) Risk factors associated with repo transactions in corporate bonds -

- a. The market for the aforesaid product is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. If a counterparty fails, the scheme would have to take recourse to the collateral provided. If a counterparty fails to repay and the value of the collateral falls beyond the haircut, then the Scheme would be exposed to a loss of interest or principal
- b. Further, the exposure to debt securities provided as collateral, and the issuer of the debt securities makes a default, the scheme may lose the whole, or substantial portion of the amount. This risk is somewhat mitigated by the fact that only bonds which have credit rating of AA and above can be accepted as collateral for repo transactions.

(vi) Risk associated with a close ended scheme

The tenor of the scheme shall be 1123 Days from the date of allotment. The investor invests in such schemes with an expectation of generating wealth over the tenor of the scheme. The fund manager also invests funds as per the stated strategy keeping the above tenor in mind. While this allows the fund manager to take relatively long term investment calls without worrying about redemptions mid-way, in such schemes, the unit holder cannot exit the scheme before the maturity of the scheme, irrespective of changes in market conditions and alternative investment opportunities. Secondly, the stated strategy of the scheme may not be realized, within the tenor of the scheme. Other risk factors pertaining to the close ended schemes have been added under relevant sections.

The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment

IPV requirements.

Updation of 'missing / not available' KYC information along with IPV is currently a one-time requirment and needs to be completed with any one of the mutual funds i.e. need not be done with all the mutual funds where investors have existing investments. Once the same is done then the KYC status at CVL-KRA will change to 'Verified by CVL KRA' after due verification. In such a scenario, where the KYC status changes to 'Verified by CVL KRA', investors need not submit the 'missing/not available' KYC information to mutual funds again. Individual Investors are required to submit 'KYC Details Change Form' issued by CVL-KRA available on their website www.cvlkra.com.

In case of Non Individual investors, complied with KYC process before December 31, 2011, KYC needs to be done afresh due to significant and major changes in KYC requirements. Investors to provide the complete details in the KYC application form along with the required documents (for individual investors or non-individual investors as appropriate).
