

## Aim to provide your money the protection it deserves

### ICICI Prudential Capital Protection Oriented Fund - Series X 1235 Days Plan A seeks to -

- Protect capital by investing a portion of the portfolio in highest rated debt/government securities & money market instruments
- Provide capital appreciation by investing the balance in equity and equity related securities

Rated  
[CARE]  
AAAmfs(SO)\*

#### Unique features

A minimum of 85% of net assets will be invested in highest rated debt and government securities (rated AAA investment grade or equivalent rating). This is done with the aim to grow it to the size of the initial capital invested by the end of ~3.5 years.

The remaining, upto 15% will be invested in equity shares of companies without any sector bias. This exposure may provide the portfolio with an element of potential capital appreciation.

#### How does Capital Protection Oriented Fund work?

Let's assume that the Scheme invests ~85% in highest rated Debt/Government and Money market instruments. The 85% of the debt portfolio will be structured with an aim to grow over the tenure of the Scheme to 100% (net of annual recurring expenses) thereby aiming to protect the capital invested.

Rest ~15% will be invested in equities and equity related instruments. As explained in the scenarios given below, over 3.5 years the initial Scheme investment has remained intact and the value of portfolio appreciated, despite positive or negative equity returns. Thus, as illustrated below fixed income allocation in this Scheme aims for capital protection and equity provides potential upside to the portfolio.

#### Scenario analysis for ~ 3.5 years and above

	Scenario 1	Scenario 2	Scenario 3
Scheme Corpus (₹)	100	100	100
Debt Allocation (₹)	85	85	85
Debt Value on maturity (₹) (A)	100	100	100
Direct Equity Allocation (₹)	15	15	15
CAGR (%) on Equity Allocation	-15	0	15
Equity Value at the time of Scheme maturity (₹) (B)	8.66	15	24.07
Scheme Value at maturity (₹) - (A+B)	108.66	115	124.07

The illustration given above is to explain the concept and working of Capital Protection Oriented Fund. This orientation towards protection of capital originates from the portfolio structure of the Scheme and not from any bank guarantee, insurance cover etc. There is a possibility of issuer default even in case of investments made in highest rated securities. It is also possible that equity markets correct more significantly than what is explained in above illustration. A variety of market factors may affect this analysis and this does not reflect all possible loss scenarios. There is no certainty that any of the above mentioned scenarios can be achieved. Investors are requested to refer the Scheme Information Document to understand various risks associated with investing in the Scheme.

## Fund Suitability

- The Scheme is suitable for investors who do not want to take interest rate risk and aim to earn prevailing yields over the tenure of the Scheme
- It offers an opportunity to investors to participate in equities while aiming for stability in the portfolio as well. (As the scheme invests in highest rated debt and government securities.)
- Investors can take benefit of indexation and get an opportunity to earn tax-adjusted returns

## Market Outlook

India's Consumer price inflation (CPI) declined to 4.83% in March 2016, from 5.18% in February 2016, meanwhile India's current account deficit was \$7.1 billion or 1.3% of Gross Domestic Product (GDP) in October – December 2015-16, from \$8.7 billion or 1.7% of GDP in the July – September 2015-16. India recorded a trade deficit of \$5 billion in March 2016, lower than \$6.5 billion in February 2016 and much lower than \$11.8 billion a year ago. India's macro fundamentals have improved considerably in the past 24 months, which makes it easier for the economy to absorb the adverse impact of potential external shocks compared to other Emerging Markets (EM) peers. This may be a suitable time to invest for domestic investors with around 3.5 years view. We continue to believe that equities, albeit reasonably valued, offers a good medium to long term investment opportunity.

There is an opportunity in the current situation to invest in equity for long term capital appreciation. We believe, inflation will undershoot RBI's expectations, and with policy makers globally following unconventional monetary policies due to fears of deflation, interest rates in India will continue to come down gradually. It is opportune time lock in your investments at prevailing levels of yield with an aim to generate reasonable returns.

### Key Scheme Features

The scheme offered is "oriented towards protection of capital" and "not with guaranteed returns". The orientation towards protection of the capital originates from the portfolio structure of the scheme and not from any bank guarantee, insurance cover etc. The ability of the portfolio to meet capital protection on maturity to the investors can be impacted in certain circumstances including changes in government policies, interest rate movements in the market, credit defaults by bonds, expenses, reinvestment risk and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets. Accordingly, investors may lose part or all of their investment (including original amount invested) in the Scheme. No guarantee or assurance, express or implied, is given that investors will receive the capital protected value at maturity or any other returns. Investors in the Scheme are not being offered any guaranteed / assured returns.
