I. INTRODUCTION

A **RISK FACTORS:**

Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:

a) **STANDARD RISK FACTORS:**

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- Edelweiss ETF - Nifty Quality 30 is the name of the Scheme & does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000 made by it towards setting up the Fund.
- The Scheme is not a guaranteed or assured return Scheme.

b) **SCHEME SPECIFIC RISK FACTORS:**

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. Risk Factors Associated with Equity & Equity related instruments:

The value of the Scheme's investments may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, etc. Settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. The Scheme may face liquidity risk or execution risk or redemption risk or the risk of NAV going below par. For details, please refer SAI.

Risks related to Corporate Action:

Corporate Action trades are subject to all such risks that any equity security may have; however in certain cases the risks can be more specific as mentioned below:

- The promoter may choose not to accept the discovered prices;
- Regulatory hurdles may delay any specific corporate action.

2. Risk Factors associated with Exchange traded schemes:**a. Passive Investments:**

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

b. Tracking Error Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the Index due to certain factors such as the fees and expenses of the Scheme, Corporate Actions, Cash balance, changes to the Underlying Index and regulatory policies which may affect AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The Scheme's returns may therefore deviate from those of its Underlying Index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the Index and the NAV of the Scheme. Tracking Error may arise due to the following reasons:

- a. Expenditure incurred by the Scheme and the Management Fee charged to the Scheme.
- b. The Funds may not be invested at all times as a portion of the funds may be kept in cash to meet redemptions or for corporate actions of securities in the Index.
- c. Securities trading may halt temporarily due to circuit filters.
- d. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- e. Rounding off of quantity of shares underlying the Index.
- f. Income received by way of dividend.
- g. NSE undertakes a periodical review of the scrips that comprise the underlying Index and may either exclude or include new scrips. In such an event, the Scheme will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately.

The Fund Manager would monitor the Tracking Error of the Scheme on an ongoing basis and would seek to minimize the Tracking Error to the maximum extent possible. There can be no assurance or guarantee that the Scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index.

c. Market Trading Risks:

i. Absence of Prior Active Market:

Although the Scheme will be listed on NSE, there can be no assurance that an active secondary market will develop or be maintained. Hence there could be a time when trading in the Units of the Scheme would be infrequent.

ii. Trading in Units may be halted:

Trading in the units of the scheme on NSE may be halted because of market conditions or for reasons that in view of NSE or SEBI, trading in the units of the scheme is not advisable.

In addition, trading of the units of the scheme are subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange and SEBI 'circuit filter' rules.

There can be no assurance that the requirements of NSE necessary to maintain the listing of the units of the Scheme will continue to be met or will remain unchanged.

iii. Lack of Market Liquidity:

The Scheme may not be able to immediately sell certain types of illiquid Securities. The purchase price and subsequent valuation of restricted and illiquid Securities may reflect a discount, which may be significant, from the market price of comparable Securities for which a liquid market exists.

iv. Units of the scheme may trade at prices other than NAV:

The units of the scheme may trade above or below their NAV. The NAV of the scheme will fluctuate with changes in the market value of the Scheme's holdings. The trading prices of the units of the scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand for the units of the scheme. However, given that units of the scheme can be created and redeemed in creation units directly with the Fund, it is expected that large discounts or premiums to the NAV of units of the scheme will not sustain due to arbitrage opportunity available.

v. Regulatory Risk:

Any changes in trading regulations by the Stock Exchange/SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.

vi. Asset Class Risk:

The returns from the types of Securities in which the Scheme invests may under-perform returns of general Securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under-performance in comparison of Securities markets.

d. Redemption Risk:

Investors should note that even though the Scheme is an open ended Scheme, subscription/redemptions directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific lot sizes. Generally, these lot sizes are larger as compared to normal funds. Thus, even though this Scheme is open ended, due to large lot size, very few investors can directly subscribe and redeem the units of the Scheme.

However, investors wishing to subscribe/redeem units in other than specific lot sizes can do so by buying/selling the same on NSE.

e. Risk specific to investing in underlying companies of Nifty Quality 30 Index

The Scheme by mandate restricts its investments to Securities of the underlying index which represents the Nifty Quality 30 Index having 30 constituents and will therefore be subject to the risks associated with such concentration.

f. The units will be issued only in demat form through depositories. The records of the depository are final with respect to the number of units available to the credit of unit holder. Settlement of trades, repurchase of units by the Mutual Fund depends up on the confirmations to be received from depository (ies) on which the Mutual Fund has no control.

3. Risk factors associated with Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Trading in derivatives has the following risks:

- a. An exposure to derivatives in excess of the hedging requirements can lead to losses.
- b. An exposure to derivatives, when used for hedging purpose, can also limit the profits from a genuine investment transaction.
- c. Derivatives carry the risk of adverse changes in the market price.
- d. Illiquidity Risk i.e. risk that a derivative trade may not be executed or reversed quickly enough at a fair price, due to lack of liquidity in the market.

The Fund may use derivatives instruments like equity futures & options, or other derivative instruments as permitted under the Regulations and Guidelines. Usage of derivatives will expose the Scheme to liquidity risk, open position risk, and opportunities risk etc. Such risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. In case of the derivative strategies, it may not be possible to square off the cash position against the corresponding derivative position at the exact closing price available in the Value Weighted Average Period. Debt derivatives instruments like interest rate swaps, forward rate agreements or other derivative instruments also involve certain risks. For details, please refer SAI.

4. Risk factors associated with Fixed Income and Money Market Instruments:

The Scheme will invest not less than 95% its corpus in the securities representing Nifty Quality 30 Index as this Scheme endeavors to earn returns that closely correspond to the total returns represented by Nifty Quality 30 Index. The Scheme will have insignificant cash or debt/money market investments. Therefore, the scheme is not significantly susceptible to risks associated with debt/money markets. Risks associated with debt /money market instruments are as under:

- **Interest rate risk:** Price of a fixed income instrument generally falls when the interest rates move up and vice-versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Spread risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit risk or default risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity & Settlement Risk:** The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Reinvestment risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Prepayment Risk:** The Scheme may receive payment of monthly cashflows earlier than scheduled, which may result in reinvestment risk.
- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities

5. Risks Associated With Stock Lending:

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, rendering the value of collateral inadequate until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and/or the approved intermediary may suddenly suffer severe business setback and become unable to honour its commitments. This, along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can be temporary illiquidity of the securities that are lent out and the Scheme will not be able to sell such lent out securities until they are returned. There is also a possibility of Opportunity loss.

*** REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

As per SEBI Circular SEBI/IMD/CIR No. 10/22701/03 dated December 12, 2003, the provisions with respect to minimum number of investors and maximum holding for single investor are not applicable to an exchange traded fund. Accordingly, these provisions shall not be applicable to the Scheme.

*** SPECIAL CONSIDERATIONS**

The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1,00,000/- (Rupees One Lakh) collectively made by them towards setting up the Scheme or such other accretions and additions to the initial corpus set up by the Sponsor.

Neither this Document nor the Units have been registered in any other jurisdiction. The distribution of Units /this Statement in certain jurisdictions may be restricted or totally prohibited and accordingly, persons who come into possession of this Document are required to inform themselves about, and to observe, any such restrictions.

The AMC can invest in any of the Schemes of Edelweiss Mutual Fund subject to the limits as prescribed by the SEBI Regulations and in such case it will not be entitled to charge any fees on such investments. While at all times the Trusteeship Company and the Asset Management Company will endeavor that excessive holding of Units in the Scheme among a few Unit holders is avoided, however, the funds invested by these aforesaid persons may acquire a substantial portion of the Scheme's outstanding Units and collectively may constitute a majority unit holder in the Scheme.

Redemption of Units held by such persons may have an adverse impact on the value of the Units of the Scheme because of the timing of any such redemption. It may also have impact on the liquidity of the Scheme, which may lead to an adverse impact on the NAV of the Scheme.

The Trustee may further mandatorily redeem units of any Unit holder in the event it is found that the Unit holder has submitted information either in the application or otherwise that is false, misleading or incomplete. If a Unit holder makes a redemption request immediately after purchase of units, the Fund shall have a right to withhold the redemption request till sufficient time has elapsed to ensure that the amount remitted by the Unit holder (for purchase of units) is realized and the proceeds have been credited to the Scheme's Account. However, this is only applicable if the value of redemption is such that some or all of the freshly purchased units may have to be redeemed to effect the full redemption.

II INFORMATION ABOUT THE SCHEME

A NAME & TYPE OF SCHEME

Edelweiss ETF – Nifty Quality 30 is an Open Ended Exchange Traded Fund.

B INVESTMENT OBJECTIVE

The investment objective of the scheme is to provide returns before expenses that closely correspond to the total returns of the Nifty Quality 30 Index subject to tracking errors.

However, there is no assurance that the investment objective of the scheme will be realized and the Scheme does not assure or guarantee any returns.

C ASSET ALLOCATION AND INVESTMENT PATTERN

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Asset Class	Indicative Allocation (% to net assets)	Risk Profile
Stocks constituting Nifty Quality 30 Index	95% to 100%	Medium to High
Debt & money market instruments (with unexpired maturity not exceeding 91 days) and Liquid Schemes	0% to 5%	Low

Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions for a temporary period. The gross position to such derivatives will be restricted to 5% of net assets of the Scheme.

Short Duration for this purpose may include but not limited to the following:

- a. If there is a dividend declared, the same needs to be reinvested into the Scheme. Though the Index would do the same next day (i.e. ex dividend), the Scheme would account for the dividend in about 15-20 days, post which the money can be reinvested. Till such time to reduce the tracking error the Scheme would take exposure in derivatives and post accrual of the dividend, fresh stocks would be bought in the proportion of the Index;
- b. In case of rebalancing, if a stock is moving out and a new stock enters the Index, to manage the pay-in/ pay-out mismatch, the Scheme shall take exposure to derivatives, which would be for a very short term; and
- c. In case liquidity pertaining to the underlying stock is limited and derivative is available at a cheaper price, the Scheme may take exposure to derivative to reduce tracking error. This position would be reversed as soon as the stock gains liquidity and starts trading at par.

Notes:

- The Scheme shall neither make investments in any Fund of Funds Scheme, Securitised Debt instrument, Credit Default Swap, Foreign Securities and/or ADRs/GDRs, repo in corporate debt securities nor will it engage in short selling of securities.
- The funds under the Scheme shall be deployed in eligible securities, in accordance with the investment objective of the scheme within 5 Business Days from closure of NFO Period.
- The Scheme can take derivative exposure upto a limit as stated in the tables above. The total exposure related to options premium paid will not exceed 5% of the net assets of the Scheme.
- The cumulative gross exposure through equity, debt and derivative positions will not exceed 100% of the net assets of the Scheme. However, cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- The Scheme may engage in Stock Lending in accordance with SEBI guidelines in this regard. Not more than 20% of the net assets of the Scheme invested in the stocks constituting Nifty Quality 30 Index would generally be deployed in stock lending and not more than 5% of the net assets of the Scheme will be deployed in Stock Lending to any single counterparty.
- From time to time, the Scheme may hold cash and/or invest in the Collateralized Borrowing & Lending Obligations (CBLO) or repo to meet the liquidity requirements.
- Pending deployment of funds of the Scheme in securities in terms of the investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of scheduled commercial banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as amended from time to time.
- The Fund will endeavor to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum.

Change In Asset Allocation:

The Scheme is a passively managed exchange traded open-ended index scheme, therefore change in investment pattern is normally not foreseen. However for short durations part of the corpus may be pending for deployment, in cases of extreme market conditions, special events or corporate events, like declaration of dividend by the companies comprising the index.

Subject to the Regulations, the asset allocation pattern indicated above may change, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors or due to voluntary / involuntary corporate actions. Voluntary Corporate Actions are events in which the Fund as shareholders have the choice whether to participate in the event or not eg. buyback. Involuntary Corporate Actions are events where participation of shareholders is mandatory eg. dividend payment.

Such changes in the investment pattern will be for short term and defensive considerations. In the event of the asset allocation falling outside the limits specified in the asset allocation table due to any of the events, other than involuntary corporate actions, the Scheme will rebalance the portfolio within seven days. In case of involuntary corporate actions, the AMC shall rebalance/realign the portfolio within 30 days. However, if market conditions do not permit the Fund Manager to rebalance the portfolio of the Scheme within the stipulated period of 7 days/30 days, respectively, justification for the same shall be provided to the Investment Committee and the reason for the same shall be recorded in writing. The Investment Committee shall then decide on the course of action.

Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be effected only in accordance with the provisions of sub

regulation (15A) of Regulation 18 of the Regulations, as detailed later in this document.

D WHERE WILL THE SCHEME INVEST?

Investment in Equity and Equity related instruments:

The Scheme shall invest in stocks which are constituents of the underlying Index viz. Nifty Quality 30 Index, in the same proportion as the Index. The Scheme shall also invest in debt and money market instruments to meet the liquidity requirements.

The investment restrictions and limits are specified in Schedule VII of SEBI Regulations, which are mentioned under the heading 'Investment Restrictions'.

Investment in Debt and Money Market securities:

The Scheme shall invest in a range of Debt & Money Market Instruments to meet liquidity and expense requirements. Some of these instruments are:

- a. Securities created and issued by Governments of India and/or repos/ reverse repos in such Government Securities as may be permitted by RBI (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills).
- b. Securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills).
- c. Corporate debt securities (of both public and private sector undertakings) including Bonds, Debentures, Notes, etc.
- d. Money market instruments permitted by SEBI/RBI, having maturities upto one year and call money market or in alternative investment for the call money market as may be provided by the RBI to meet the liquidity requirements.
- e. Any other domestic fixed income securities.
- f. Any other like instruments as may be permitted by RBI/SEBI/ such other Regulatory Authority from time to time.

The above-mentioned securities could be listed, unlisted, secured, unsecured, and may be acquired through Primary, secondary market offerings, private placements, rights offer etc. Further, investments in debentures, bonds and other fixed income securities will usually be in instruments, which have been assigned investment grade ratings by an approved rating agency.

Investments in Derivative Instruments:

The Scheme may invest in Derivative Instruments to the extent permitted under SEBI Circulars DNPD/Cir-29/2005 dated September 14, 2005, DNPD/Cir-29/2005 dated January 20, 2006, SEBI/DNPD/Cir-31/2006 dated September 22, 2006 and CIR/IMD/DF/11/2010 dated August 18, 2010 on 'Trading by Mutual Funds on Exchange Traded Derivatives' as amended from time to time. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of derivatives requires an understanding not only of the underlying instrument but also of the derivative instruments itself. The Scheme may use derivative instruments such as index futures and options, stock futures and options contracts, warrants, convertible securities, swap or forward rate agreements or any other derivative instruments that are permissible or may be permissible in future under applicable

regulations and such investments shall be in accordance with the investment objective of the Scheme.

Index futures/options are meant to be an efficient way of buying/selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. Index futures/options can be an efficient way of achieving the Scheme's investment objective. Notwithstanding the pricing, they can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the Underlying Index and will be easy to settle compared to physical portfolio of shares representing the Underlying Index. In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future/option. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares. This settlement risk is likely to be minimized if the exchange acts as the clearing corporation and the counter party, as is the practice in the developed markets. The Scheme will not maintain any leveraged or trading positions.

Investments in the Schemes of Mutual Fund:

The Scheme may invest in units of money market/liquid Schemes managed by the AMC, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing SEBI Regulations. As per SEBI Regulations, no Investment Management fees will be charged for such investments and the aggregate inter Scheme investment made by all Schemes in the schemes of the Mutual Fund shall not exceed 5% of the Net Asset Value of the Mutual Fund.

E INVESTMENT STRATEGY & APPROACH

The Scheme will track Nifty Quality 30 Index and will use a "Passive" or indexing approach to try and achieve Scheme's investment objective. The Scheme will not attempt to beat the markets it tracks and will not seek defensive positions at any point in time, irrespective of the market movements. Passive approach means the Scheme will deliver index-linked returns and eliminates risks pertaining to over/underperformance vis-à-vis a benchmark. The Scheme shall invest all of its funds as per its investment objective and asset allocation pattern, except to meet its liquidity requirements.

The Scheme shall also invest upto 5% in Money Market Instruments, Government Securities, bonds, debentures and cash at call, as per its investment allocation pattern.

Risk Mitigation Measures:

The Scheme will predominantly invest in stocks which are constituents of the underlying Index viz. Nifty Quality 30 Index, in the same proportion as the Index. The Scheme shall also invest in debt and money market instruments to meet the liquidity requirements.

This allocation will be steadily monitored and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

Since disciplined investing requires risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The Fund has designed a detailed process to identify, measure, monitor and manage the portfolio risk. The aim is not to eliminate the risk completely but to have a structured mechanism towards risk management thereby maximizing potential opportunities and minimize the adverse effects of risk. Few of the key risk identified are:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Market/Volatility Risk Risk arising due to vulnerability to price fluctuations and volatility, having material impact on the overall returns of the Scheme.	ETF, being a passive investment, carries lesser risk as compared to active fund management. The portfolio follows the index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to Tracking Error. Thus there is no additional element of volatility or stock concentration on account of fund manager decisions.
Derivatives Risk Various inherent risks arising as a consequence of investing in derivatives.	Continuous monitoring of the derivatives positions and strict adherence to the regulations and internal norms.
Credit risk Risk associated with repayment of investment	Investment universe carefully selected to only include issuers with high credit quality
Performance risk Risk arising due to change in factors affecting the market	Understand the working of the markets and respond effectively to market movements
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	Control portfolio liquidity at portfolio construction stage. Having optimum mix of cash & cash equivalents along with the debt papers in the portfolio
Interest rate risk Price volatility due to movement in interest rates	Control the portfolio duration and periodically evaluate the portfolio structure with respect to existing interest rate scenario
Event risk Price risk due to company or sector specific event	Understand businesses to respond effectively and speedily to events. Usage of derivatives: Hedge portfolios, if required, in case of predictable events with uncertain outcomes

Portfolio Turnover:

The Scheme is an open-ended Exchange Traded Fund and it is expected that there may be a number of subscriptions and repurchases on a daily basis through Stock Exchange(s) or Authorised Participants and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition, if any, and corporate actions of securities included in Nifty Quality 30 Index. However, it will be the endeavour of the Fund Manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the Scheme and the purchase/redemption transactions on an ongoing basis in the Scheme.

Tracking Error:

Tracking Error means the extent to which the NAV of the fund moves in a manner inconsistent with the movements of the benchmark index on any given day or over any given period of time due to any cause or reason whatsoever including but not limited to expenditure incurred by the Scheme, dividend payouts if any, whole cash not invested at all times as it may keep a portion of funds in cash to meet redemption etc. The Fund will endeavor to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum.

Tracking error could be the result of a variety of factors including but not limited to:

- Delay in the purchase or sale of stocks within the benchmark due to
 - » Illiquidity in the stock,
 - » Delay in realisation of sale proceeds,
 - The Scheme may buy or sell the stocks comprising the index at different points of time during the trading session at the then prevailing prices which may not correspond to its closing prices.
 - The potential for trades to fail, which may result in the Scheme not having acquired the stocks at a price necessary to track the benchmark price.
 - The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses.
 - Disinvestments to meet redemptions, recurring expenses, dividend payouts etc.
-
- Execution of large buy / sell orders
 - Transaction cost and recurring expenses
 - Delay in realisation of Unit holders' funds
 - Levy of margins by exchanges

O. INTRODUCTION TO EXCHANGE TRADED FUNDS (ETF)

ETFs are innovative products that provide exposure to an index or a basket of securities or commodity that trade on the exchange like a single stock. ETFs have a number of advantages over traditional open-ended index funds as they can be bought and sold on the exchange at prevailing live prices that are usually close to the actual intra-day NAV of the Scheme. ETFs are an innovation to traditional mutual funds as ETFs provide Investors a fund that closely tracks the performance of an index / commodity with the ability to buy/sell on an intra-day basis. Unlike listed close ended funds, which trade at substantial premiums or more frequently at discounts to NAV, ETFs are structured in a manner which allows to create new Units and Redeem outstanding Units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription /redemption of units work on the concept of exchange with underlying securities. In other words, Large Investors/institutions can purchase Units by depositing the underlying securities with the Fund/AMC and can redeem by receiving the underlying shares in exchange of Units. Units can also be bought and sold directly on the exchange.

ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the Investors in the form of lower costs. Further more, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges. The structure of ETFs is such that it protects long-term Investors from inflows and outflows of short-term Investor. This is because the Fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the creation/redemption of units through the in-kind mechanism the fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

ETFs are highly flexible and can be used as a tool for gaining instant exposure to the equity markets, equitising cash or for arbitraging between the cash and futures market.

Benefits of ETFs

1. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.

2. Can be bought/sold anytime during market hours at prices that are expected to be close to actual NAV of the schemes. Thus, investor invests at real-time prices as opposed to end of day prices.
3. No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the net.
4. Ability to put limit orders.
5. Minimum investment for an ETF is one unit.
6. Protects long-term investors from the inflows and outflows of short-term investors.
7. Flexible as it can be used as a tool for gaining instant exposure to the respective equity/gold markets, equitising cash, hedging or for arbitraging between the cash and futures market.
8. Helps in increasing liquidity of underlying cash market.
9. Aids low cost arbitrage between futures and cash market.
10. An investor can get a consolidated view of his investments without adding too many different account statements as the Units issued would be in demat form.

Uses of ETFs

1. **Investors with a long-term horizon:** Allows diversification of portfolio at one shot thereby reducing scrip specific risk at a low cost.
2. **FII, Institutions and Mutual Funds:** Allows easy asset allocation, hedging and equitising cash at a low cost.
3. **Arbitrageurs:** Low impact cost to carry out arbitrage between the cash and the futures market.
4. **Investors with a shorter term horizon:** Allows liquidity due to ability to trade during the day and expected to have quotes near NAV during the course of trading day.

Risks of ETFs

1. **Absence of Prior Active Market:** Although the units of ETFs are listed on the Exchange for trading, there can be no assurance that an active secondary market will develop or be maintained.
2. **Lack of Market Liquidity:** Trading in units of ETFs on the Exchange on which it is listed may be halted because of market conditions or for reasons that, in the view of the concerned stock exchange or market regulator, trading in the ETF units is inadvisable. In addition, trading in the units of ETFs is subject to trading halts caused by extraordinary market volatility pursuant to 'circuit filter' rules. There can be no assurance that the requirements of the concerned stock exchange necessary to maintain the listing of the units of ETFs will continue to be met or will remain unchanged.
3. **Units of Exchange Traded Funds may trade at prices other than NAV:** Units of ETFs may trade above or below their NAV. The NAV of units of ETFs may fluctuate with changes in the market value of a Scheme's holdings. The trading prices of units of ETF will fluctuate in accordance with changes in their NAVs as well as market supply and demand. However, given that ETFs can be created / redeemed in creation units, directly with the Fund, large discounts or premiums to the NAVs will not sustain due to arbitrage possibility available.
