I - INTRODUCTION

A. RISK FACTORS

1. STANDARD RISK FACTORS

- a) Mutual Funds and securities investments are subject to market risks such as trading volumes, settlement risk, liquidity risk and default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- b) As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
- c) Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- d) R*Shares Long Term Gilt ETF is only the name of the Scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- e) The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond their initial contribution of Rs.1 lakh made by it towards the setting up of the Mutual Fund and such other accretions and additions to the corpus.
- f) The present scheme is not a guaranteed or assured return scheme. The Mutual Fund is not guaranteeing or assuring any dividend/bonus. The Mutual Fund is also not assuring that it will make periodical dividend/bonus distributions, though it has every intention of doing so. All dividend/bonus distributions are subject to the availability of distributable surplus of the Scheme.

2. SCHEME SPECIFIC RISK FACTORS:

a) Risks associated with investing in Bonds & Money Market Instruments

Investment in Bonds and Money Market instruments is subject to price, credit, and interest rate risk

The NAV of the Scheme may be affected, inter alia, by changes in the market conditions, interest rates, trading volumes, settlement periods and transfer procedures.

Investing in Bonds and Money market securities are subject to the risk of an Issuer's inability to meet principal and interest payments obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).

The timing of transactions in Bonds and money market instruments, which will often depend on the timing of the Purchases and Redemptions in the Scheme, may result in capital appreciation or depreciation because the value of money market obligations generally varies inversely with the prevailing interest rates.

Interest Rate Risk

As with all fixed income securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian markets can be volatile leading to the possibility of large price movements up or down in money market securities and thereby to possibly large movements in the NAV.

Liquidity or Marketability Risk

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Credit Risk

Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the money market security (i.e. will be unable to make timely principal and interest payments on the security). While this risk is limited in money market instruments, because of stringent restrictions on issuers, it is not eliminated completely. Hence, they are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default. Investments in GSECS (Government securities) which are denominated in local currency (INR) are not expected to carry any credit risk.

Reinvestment Risk

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cashflows.

Risks associated with various types of securities

	CREDIT RISK	LIQUIDITY RISK	PRICE RISK
Listed	Depends on credit quality	Relatively Low	Depends on duration of instrument
Unlisted	Depends on credit quality	Relatively High	Depends on duration of instrument
Secured	Relatively low	Relatively Low	Depends on duration of instrument
Unsecured	Relatively high	Relatively High	Depends on duration of instrument
Rated	Relatively low and depends on the rating	Relatively Low	Depends on duration of instrument
Unrated	Relatively high	Relatively High	Depends on duration of instrument

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern

b) Risk associated with G-Sec

Investment in Government securities like all other debt instruments is subject to price and interest rate risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in prices is a function of the existing coupon, days to maturity and the increase or decrease in interest rates. Price-risk is not unique to Government securities but is true for all fixed income securities. Despite a high degree of liquidity in comparison with other debt instruments on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

c) Risk associated with ETF

1. Market risk

ETFs are typically designed to track the performance of certain indices, market sectors, or groups of assets such as stocks, bonds, or commodities. ETF managers may use different strategies to achieve this goal, but in general they do not have the discretion to take defensive positions in declining markets. Investors must be prepared to bear the risk of loss and volatility associated with the underlying index/assets.

2. Tracking errors

Tracking errors refer to the disparity in performance between an ETF and its underlying index/assets. Tracking errors can arise due to factors such as the impact of transaction fees and expenses incurred to the ETF, changes in composition of the underlying index/assets, and the ETF manager's replication strategy

3. Trading at discount or premium

An ETF may be traded at a discount or premium to its Net Asset Value (NAV). This price discrepancy is caused by supply and demand factors, and may be particularly likely to emerge during periods of high market volatility and uncertainty.

4. Liquidity risk

Authorized participants (APs) are Exchange Participants that provide liquidity to facilitate trading in ETFs. Although most ETFs are supported by one or more APs, there is no assurance that active trading will be maintained.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

As per Circular number SEBI/IMD/CIR NO 10/22701/03 dated December 12, 2003, the above guidelines are not applicable for Exchange Traded Funds. As R*Shares Long Term Gilt ETF is an exchange traded fund, same is not applicable

C. SPECIAL CONSIDERATIONS

The Mutual Fund is not assuring or guaranteeing that it will be able to make regular periodical distributions/distribute bonus units to its Unit holders though it has every intention to manage the portfolio so as to make periodical income/bonus distributions to Unit holders. Periodical distributions will be dependent on the returns achieved by the Asset Management Company through the active management of the portfolio. Periodical distributions may therefore vary from period to period, based on investment results of the portfolio.

Other Scheme Specific Risk factors

- a) The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer procedures on the NDS platform. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's investment portfolio, these periods may become significant.
- b) Although, the objective of the Fund is to generate optimal returns, the objective may or may not be achieved. The investors may note that if the AMC/Investment Manager will be passively tracking the Nifty 8-13 yr G-Sec Index and the performance of the index may result in negative returns. Given the nature of scheme, the portfolio turnover ratio may be on the higher side. At times, such churning of portfolio may lead to losses due to subsequent negative or unfavorable market movements.

- c) Credit And Rating Downgrade Risks may affect the value of bonds & Money Market instruments, though investment in Rupee (INR) denominated government bonds will not be affected.
- d) The NAV of the scheme to the extent invested in Bond & Money market securities are likely to be affected by changes in the prevailing rates of interest and are likely to affect the value of the Scheme's holdings and thus the value of the Scheme's Units.
- e) While securities that are traded on the NDS platform will carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the NDS platform. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- f) The tax benefits available under the scheme are as available under the present taxation laws and are available only to certain specified categories of investors and that is subject to fulfillment of the relevant conditions. The information given is included for general purposes only and is based on advise that the AMC has received regarding the law and the practice that is currently in force in India and the investors and the Unitholders should be aware that the relevant fiscal rules and their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/Unitholder is advised to consult his/her own professional tax advisor.

The Mutual Fund is not assuring or guaranteeing that it will be able to make regular periodical distributions/distribute bonus units to its Unit holders though it has every intention to manage the portfolio so as to make periodical income/bonus distributions to Unit holders. Periodical distributions will be dependent on the returns achieved by the Asset Management Company by tracking the Nifty 8-13 yr G-Sec Index. Periodical distributions may therefore vary from period to period, based on investment results of the portfolio.

Past performance of the Sponsor/ the AMC/ the Mutual Fund is not indicative of the future performance of the Scheme. R*Shares Long Term Gilt ETF is the name of the Scheme and does not in any manner indicate either the quality of the Scheme; its future prospects or returns.

All dividend distributions are subject to the availability of distributable surplus in the Scheme. When an investor switches from this scheme to another scheme on a future date, the scheme specific risk factors applicable to such scheme into which he switches, will apply

Market Trading Risks

- a) Absence of Prior Active Market: Although the units of ETFs are listed on the Stock Exchange for trading, there can be no assurance that an active secondary market will develop or be maintained.
- b) Lack of Market Liquidity: Trading in units of ETFs on the Stock Exchange on which it is listed may be halted because of market conditions or for reasons that, in the view of the concerned Stock Exchange or Market Regulator, trading in the ETF Units is inadvisable.
In addition, trading in the units of ETFs is subject to trading halts caused by extraordinary market volatility pursuant to 'circuit breaker' rules. There can be no assurance that the requirements of the concerned Stock Exchange necessary to maintain the listing of the units of ETFs will continue to be met or will remain unchanged.
- c) Units of Exchange Traded Funds May Trade at Prices Other than NAV: Units of Exchange Traded Funds may trade above or below their NAV. The NAV of Units of Exchange Traded Funds may fluctuate with changes in the market value of a Scheme's holdings. The trading prices of units of ETF will fluctuate in accordance with changes in their NAVs as well as market supply and demand. However, given that ETFs can be created / redeemed in Creation Units, directly with the fund, large discounts or premiums to the NAVs will not sustain due to arbitrage possibility available.
- d) Regulatory Risk: Any changes in trading regulations by the Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/ discount to NAV. Although R*Shares Long Term Gilt ETF are proposed to be listed on an Exchange, the AMC and the Trustees will not be liable for delay in listing of Units of the Scheme on Exchange / or due to connectivity problems with the depositories due to the occurrence of any event beyond their control.
- e) Political Risks: Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in laws and regulations could have an effect on the value of investments. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.
- f) Competition Risks: An investment in R*Shares Long Term Gilt ETF may be adversely affected by competition from other methods of investing in the Index.
- g) Right to Limit Redemptions: The Trustee, in the general interest of the unit holders of the Scheme offered under this Scheme Information Document and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day depending on the total "Saleable Underlying Stock" available with the fund.
- h) Redemption Risk – The Unit Holders may note that even though this is an open ended Exchange Traded Fund, the Scheme would ordinarily repurchase Units in Creation Unit size. Thus unit holdings less than the Creation Unit size can normally only be sold through the secondary market, unless no quotes are available on the Exchange for 3 trading days consecutively.
- i) Asset Class Risk : The returns from the types of securities in which a Scheme invests may under perform returns from the various general securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under performance in comparison of the general securities markets.
- j) Passive Investments: As R*Shares Long Term Gilt ETF is not actively managed, the underlying investments may be affected by a general decline in the Indian markets relating to its Underlying Index. The scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to take defensive positions in declining markets. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.
- k) Tracking Error Risk:
Factors such as the fees and expenses of the Scheme, cash balance, changes to the Underlying assets and regulatory policies may affect

AMC's ability to achieve close correlation with the Underlying assets of the scheme. The Scheme's returns may therefore deviate from those of its Underlying assets.

- l) Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation / Redemption of units through the in-kind mechanism the fund can keep lesser funds in cash. Also, time lag between buying / selling units and the underlying shares is much lower. The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, the AMC shall endeavor that such tracking errors shall not exceed 2% per annum.

Right to Limit Redemption

The Trustee and AMC may, in the general interest of the Unit holders of the Scheme under this Scheme Information Document and keeping in view the unforeseen circumstances / unusual market conditions, limit the total number of Units which may be redeemed on any Working Day for redemption requests of more than Rs. 2 Lakhs per folio at a scheme level. in any Scheme. . In line with the SEBI Circular dated May 31, 2016 the following conditions would be applicable.

- a. Restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:
- i. Liquidity issues – when market at large becomes illiquid and affecting almost all securities. .

Exchange Traded Fund (ETF)

ETFs are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. ETFs have a number of advantages over traditional open ended index funds as they can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs are an innovation to traditional mutual funds as ETFs provide investors a fund that closely tracks the performance of an index with the ability to buy / sell on an intra-day basis. Unlike listed close ended funds, ETFs are structured in a manner which allows to create new units and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs came into existence in the USA in 1993. The first ETFs were based on the S&P 500 and are popularly known as SPDRs (Spiders). ETFs have gained prominence over the last few years.

ETFs are usually passively managed funds wherein subscription / redemption of units work on the concept of exchange with underlying securities. In other words, large investors / institutions can purchase units by depositing the underlying securities with the fund / AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange.

ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider.

These savings in cost are passed on to the investors in the form of lower costs. Further more, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

The structure of ETFs is such that it protects long-term investors from inflows and outflows of short-term investor. This is because the fund does not bear extra transaction cost when buying / selling due to frequent subscriptions and redemptions.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation / Redemption of units through the in-kind mechanism the fund can keep lesser funds in cash. Also, time lag between buying / selling units and the underlying shares is much lower.

Benefits of ETFs

1. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
2. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
3. No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the net.
4. Ability to put limit orders.
5. Minimum investment for an ETF is one unit.
6. Protects long-term investors from the inflows and outflows of short-term investors.
7. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, hedging or for arbitraging between the cash and futures market.
8. Helps in increasing liquidity of underlying cash market.

9. Aids low cost arbitrage between Futures and Cash market.
10. An investor can get a consolidated view of his investments without adding too many different account statements, as ETFs will be in demat form.

Uses of ETFs :

1. Investors with a long-term horizon

Allows diversification of portfolio at one shot, thereby reducing scrip specific risk at a low cost.

2. FIIs, Institutions and Mutual Funds

Allows easy asset allocation, hedging at a low cost.

3. Arbitrage

Low impact cost to carry out arbitrage between the Cash and the Futures market.

4. Investors with a shorter term horizon

Allows liquidity due to ability to trade during the day and expected to have quotes near NAV during the course of trading day.

II. INFORMATION ABOUT THE SCHEME – R*Shares Long Term Gilt ETF

A. TYPE OF THE SCHEME –

An Open Ended, Index Exchange Traded Fund

B. WHAT IS THE INVESTMENT OBJECTIVE OF THE SCHEME?

The investment objective of the scheme is to provide investment returns closely corresponding to the total returns of the securities as represented by the Nifty 8-13 yr G-Sec Index before expenses, subject to tracking errors. However, there can be no assurance or guarantee that the investment objective of the Scheme will be achieved

C. HOW WILL THE SCHEME ALLOCATE ITS ASSETS?

Under normal circumstances, the Indicative asset allocation would be:

Instruments	Indicative asset allocation (% of total assets)		Risk Profile
	Minimum	Maximum	
Securities constituting Nifty 8-13 yr G-Sec Index	95%	100%	Low to Medium
Money Market instruments (with maturity not exceeding 91 days)*	0%	5%	Low to Medium

* Money Market Instruments include commercial papers, commercial bills, treasury bills, and Government securities having an unexpired maturity upto one year, call or notice money, certificate of deposit, CBLOs and any other like instruments as specified by the Reserve Bank of India from time to time.

The scheme will not participate in repo in corporate debt. The Scheme, in general, will hold all the securities that comprise the underlying Index in the same proportion as the index. Expectation is that, over a period of time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error will not exceed by 2% p.a. However, in case of some events like revision of constituents of index, delay in purchase/sell of securities, corporate actions pertaining to the index, etc, the tracking error may exceed the above limits. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying Index.

The scheme will neither make any investment in ADR/ GDR/ Foreign Securities/ Securitized Debt nor will it engage in short selling and securities lending. Further, it shall not take any exposure in derivative instruments.

Since the scheme is an exchange traded fund, at no point of time the scheme will deviate from the index. However, in the interest of investors, the AMC reserves the right to change the above asset allocation pattern due to extreme market conditions or corporate action activity undertaken in the underlying securities. In case of such above mentioned deviations, the AMC shall rebalance/realign the portfolio within a period of 30 days.

D. WHERE WILL THE SCHEME INVEST?

The Scheme would invest in securities comprising the Nifty 8-13 yr G-Sec Index in the same proportion (weightage) as in the Index and track the benchmark index.

The Scheme may also invest in money market instruments, in compliance with Regulations to meet liquidity requirements. The scheme may also invest in liquid schemes of Reliance Mutual Fund or any other Fund House. Money Market Instruments include commercial papers, commercial bills, treasury bills, and Government securities having an unexpired maturity upto 91 days, call or notice money, certificate of deposit, CBLOs and any other like instruments as specified by the Reserve Bank of India from time to time.

E. WHAT ARE THE INVESTMENT STRATEGIES?

What is the Investment Strategy of the fund?

R*Shares Long Term Gilt ETF is a passively managed exchange traded fund which will employ an investment approach designed to track the performance of Nifty 8-13 yr G-Sec Index. The Scheme seeks to achieve this goal by investing in securities constituting the Nifty 8-13 yr G-Sec Index in same proportion as in the Index. The Scheme will invest at least 95% of its total assets in the securities comprising the Underlying Index. The Scheme may also invest in money market instruments to meet the liquidity and expense requirements.

The fund is ideal for those investors who would like to participate in Indian Bond Market by passively investing in a Government Securities as approximately represented by Nifty 8-13 yr G-Sec Index.

Tracking Error

Tracking error is defined as the standard deviation of the difference between the daily returns of the Underlying Index and the NAV of the Scheme. Theoretically, the corpus of the Scheme has to be fully invested in the securities comprising the Underlying Index in the same proportion of weights as the securities have in the Underlying Index. However, deviations from the stated index replication may occur due to reason that the Scheme has to incur expenses, corporate actions pertaining to the Index including changes to the constituents, regulatory policies, ability of the Fund Manager to closely replicate the Underlying Index, etc. The Scheme's returns may therefore deviate from those of its Underlying Index. Tracking Error may arise due to the following reasons:

- Any delay experienced in the purchase or sale of shares due to illiquidity of the market, settlement and realization of sale proceeds and / or the registration of any securities transferred and / or any delays in receiving cash dividends and resulting delays in reinvesting them.
- The Nifty 8-13 yr G-Sec Index reflects the prices of securities at close of business hours. However, the Fund may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices on the NSE.
- The constituent securities of the underlying index may be revised periodically by either excluding or including new securities. In such an event, the Fund will endeavor to reallocate its portfolio but the available investment/ disinvestment opportunities may not permit precise mirroring of the underlying index in a short period of time.

- The potential for trades to fail, which may result the scheme not having acquired shares at a price necessary to track the index.
- The holding of a cash position and accrued income prior to distribution and accrued expenses.
- Disinvestments to meet redemptions, recurring expenses, etc.
- Fees and expenses of the scheme

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error will not be expected to exceed by 2% p.a. However, in case of the above mentioned events, including but not limited to, the tracking error may exceed the above limits.

There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index

Risk Control

For the Scheme, risks would be the impact cost on securities, the delayed communication of weightage changes by the index service providers and the delayed calculation of net change in assets of the Scheme, amongst others.

It is proposed to manage the risks by placing limit orders for basket trades and other trades, proactive follow-up with the service providers for daily change in weights in index as well as monitor daily inflows and outflows to and from the Fund closely.

While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

Internal Norms for Investment Restrictions :

At RMF, to ensure robust risk management and adequate portfolio diversification internal Investment policy for various debt schemes has been framed. Guidelines for following parameters for liquid as well as non liquid schemes have been specified in the policy:

1. Eligible Instruments: Defines the eligible instruments where the scheme can invest
2. Minimum Liquidity: Defines the instruments considered as liquid instruments and the minimum investments in these instruments as a percentage of total net assets
3. Maximum Illiquid component: Defines the instruments considered as illiquid and the maximum investment that can be made in these instruments as a percentage of net assets.
4. Rating: Defines minimum and/ or maximum investment in a particular rating as a percentage of total portfolios.
5. Maturity: Defined the weighted average maturity of a portfolio. Also defines the weighted average maturity, maximum and maturity for certain asset types like corporate bond, Gilts etc.

The Trustee Company / AMC may alter these above stated limitations from time to time, and also to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments in order to achieve its investment objectives & policies. As such all investments of the Scheme shall be made in accordance with the Regulations, including Schedule VII thereof, and the Fundamental Attributes of this Scheme.

J. HOW HAS THE SCHEME PERFORMED?

This scheme is a new scheme and does not have any performance track record.

K. HOW THE SCHEME IS DIFFERENT FROM THE EXISTING OPEN ENDED EXCHANGE TRADED FUNDS OF THE MUTUAL FUND

<p>R*Shares Banking ETF</p> <p>Asset Allocation Pattern: Securities covered by the Nifty Bank Index – 90-100%; Money Market instruments including CBLO – 0-10% Primary Investment Pattern: The investment objective of R* Shares Banking ETF is to provide returns that, before expenses, closely correspond to the total returns of the securities as represented by the Nifty Bank Index. However, the performance of Scheme may differ from that of the underlying index due to tracking error. There can be no assurance or guarantee that the investment objective of scheme will be achieved. Investment Strategy: The AMC uses a "passive" or indexing approach to try and achieve Scheme's investment objective. Unlike other Fund, the Scheme does not try to "beat" the markets they track and do not seek temporary defensive positions when markets decline or appear overvalued. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment nor will it attempt to apply any economic, financial or market analysis. Indexing eliminates active management risks in regard to over / underperformance vis-à-vis a benchmark. Differentiation: R* Shares Banking ETF endeavors to track and generate returns similar to its benchmark Nifty Bank Index by investing in its index constituents and money market instruments. The fund follows a passive strategy of management with endeavor to generate similar returns to its benchmark. Month End AUM (Rs. Crore) as on May 31, 2016: 330.51, No. of Folios as on May 31, 2016: 2155</p>
<p>R*Shares Gold ETF</p> <p>Asset Allocation Pattern: Physical Gold or Gold related Instruments as permitted by regulators from time to time-90-100%, Money Market Instrument Bonds, Debentures, Government Securities including T-Bills, Securitised Debt** & other debt securities as permitted by regulators from time to time-0-10%(**upto 10% in securitised debt). Primary Investment Pattern: The investment objective is to seek to provide returns that closely correspond to returns provided by price of Gold through investment in physical Gold (*and Gold related securities as permitted by Regulators from time to time). However, the performance of the scheme may differ from that of the domestic prices of Gold due to expenses and or other related factors. However there can be no assurance that the investment objective of the scheme will be achieved. Investment Strategy: The fund manager would use a 'passive' approach to try and achieve the investment objective of the scheme. The fund manager shall not try to "beat" the Gold Market, but aims to replicate the returns, which commensurate the returns generated, by Gold during that period. It will however endeavor to seek temporary defensive positions when markets decline or appear over valued to the extent of its investment in Money Market or other debt securities. Differentiation: R* Shares Gold ETF endeavors to track and provide similar returns to its benchmark- the domestic prices of gold through investment in physical gold and money market instruments. The fund follows a passive investment strategy and endeavors to generate returns similar to its benchmark. The fund is benchmarked to physical price of gold. Month End AUM (Rs.
