SECTION I - INTRODUCTION

A. RISK FACTORS

1. Standard Risk Factors:

- (i) Mutual Funds and securities investments are subject to investment risks such as trading volumes, settlement risk, liquidity risk, and default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- (ii) As the price / value / interest rate of the securities in which the scheme invests fluctuates, the NAV of the units issued under the Scheme can go up or down depending on the factors and forces affecting the capital markets.
- (iii) Past performance of the Sponsor/AMC/Mutual Fund is not indicative of the future performance of the Scheme.
- (iv) Reliance Fixed Horizon Fund – XXIX – Series 6 is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme, its future prospects or returns.
- (v) The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond their initial contribution of Rs.1 lakh towards the setting up of the Mutual Fund and such other accretions and additions to the corpus.
- (vi) The present scheme is not a guaranteed or assured return scheme. The Mutual Fund is not guaranteeing or assuring any dividend. The Mutual Fund is also not assuring that it will make periodical dividend distributions, though it has every intention of doing so. All dividend distributions are subject to the availability of the distributable surplus of the Scheme.

2. Scheme Specific Risk Factors:

(i) Schemes investing in Bonds:

Investors of the Scheme should be aware of the risks generally associated with investments in the fixed income and money market instruments. Given below are some of the common risks associated with investments in fixed income and money market securities.

- a. Interest Rate Risk:** As with all debt securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV.
- b. Liquidity or Marketability Risk:** This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.
- c. Credit Risk:** Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.
- d. Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cash flows.
- e. Risks associated with various types of securities**

	CREDIT RISK	LIQUIDITY RISK	PRICE RISK
Listed	Depends on credit quality	Relatively Low	Depends on duration of instrument
Unlisted	Depends on credit quality	Relatively High	Depends on duration of instrument
Secured	Relatively low	Relatively Low	Depends on duration of instrument
Unsecured	Relatively high	Relatively High	Depends on duration of instrument
Rated	Relatively low and depends on the rating	Relatively Low	Depends on duration of instrument
Unrated	Relatively high	Relatively High	Depends on duration of instrument

(ii) Risks associated with Investing in Derivatives

RCAM may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and with an intention to enhance Unit holder's interest of the Scheme.

- a.** As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

- b. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- c. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

(iii) Risk Associated with Securitised Debt

As with any other debt instrument, the following risk factors have to be taken into consideration while investing in PTCs:

a. Credit Risk

Since most of the PTCs are drawn from a cherry picked pool of underlying assets, the risk of delay / default due to poor credit quality is low. Further most of the PTCs enjoy additional cashflow coverage in terms of subordination by another lower class of PTCs or in terms of excess cash collateralization.

b. Liquidity Risk

Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

c. Price Risk / Interest Rate Risk

The price risk of these instruments shall be in line with the maturity / duration of such instruments. However given the fact that these instruments will have a maturity profile upto 2 years, the duration risk is relatively less.

Domestic Securitised debt can have different underlying assets and these assets have different risk characteristics. These may be as given in the following example:

Security 1 – Backed by receivables of personal loans originated by XYZ Bank Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds

Security 2 – Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from ABC Bank Limited

(iv) Risks associated with Listing of Units

- a. Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.
- b. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.
- c. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment.

(v) Risk factors associated with repo transactions in corporate bonds –

- a. The market for the aforesaid product is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. If a counterparty fails, the scheme would have to take recourse to the collateral provided. If a counterparty fails to repay and the value of the collateral falls beyond the haircut, then the Scheme would be exposed to a loss of interest or principal.
- b. Further, the exposure to debt securities provided as collateral, and the issuer of the debt securities makes a default, the scheme may lose the whole, or substantial portion of the amount. This risk is somewhat mitigated by the fact that only bonds which have credit rating of AA and above can be accepted as collateral for repo transactions.

(vi) Risk associated with a close ended scheme

The tenor of the scheme shall be 1112 days from the date of allotment. The investor invests in such schemes with an expectation of generating wealth over the tenor of the scheme. The fund manager also invests funds as per the stated strategy keeping the above tenor in mind. While this allows the fund manager to take relatively long term investment calls without worrying about redemptions mid-way, in such schemes, the unit holder cannot exit the scheme before the maturity of the scheme, irrespective of changes in market conditions and alternative investment opportunities. Secondly, the stated strategy of the scheme may not be realized, within the tenor of the scheme. Other risk factors pertaining to the close ended schemes have been added under relevant sections.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment.

In case of non-fulfillment with the condition of minimum 20 investors, the scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI.

In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application of such investor(s), to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 working days of the date of closure of the New Fund Offer.

C. SPECIAL CONSIDERATIONS, IF ANY

The Mutual Fund is not assuring or guaranteeing that it will be able to make regular periodical income distributions to its unitholders, though it has every intention to manage the portfolio so as to make periodical income distributions. Income distributions will be dependent on the availability of distributable and the returns achieved by the Asset Management Company through active management of the portfolio. Periodical income distributions may therefore vary from period to period, based on investment results of the portfolio.

However, if the same has not been rebalanced the details of same shall be placed before the Investment Review Committee and reasons for the same shall be recorded in writing. 2. Derivatives may be used to create synthetic fixed rate bond/ floating rate bonds. Gross investments in securities under the Scheme which includes Debt securities, Money Market Instruments and derivatives will not exceed 100% of the net assets of the Scheme.
3. Subject to the limits as contained in Schedule VII to the SEBI (Mutual Funds) Regulations, 1996, the scheme reserves the right to invest its entire allocation in debt and money market securities in any one of the fixed income security classes.
4. Investments in rated fixed income securities will be in securities rated by at least one recognized rating agency. Investments in unrated securities will be made with the approval of the Investment Committee of RCAM, within the parameters laid down by the Board of Directors of the AMC & the Trustees.

2	AA+	12%
3	AA	15%

The above haircuts are minimum stipulated haircuts where the repo period is overnight or where the remargining frequency (in case of longer tenure repos) is daily. The RBI had earlier recommended a haircut of 25%. It is proposed that we maintain a minimum haircut of 15% for all repo contract of less than 3 months, and 25% for other contracts, unless a lower haircut is approved by the Investment Committee. The Fund Manager may refer to the rating-haircut matrix published by FIMMDA, to determine the appropriate haircut.

 The above will depend upon the nature of securities invested.
10. The schemes may also enter into repurchase and reverse repurchase obligations in all securities held by them as per the guidelines and regulations applicable to such transactions. It is the intention of the scheme to trade in the derivatives market as per the Regulations.

13. While it is the intention of the Scheme to maintain the maximum exposure guidelines provided in the table above, there may be instances when these percentages may be exceeded. Typically, this may occur while the Scheme is new and the corpus is small thereby causing diversification issues.
14. Investments may be in listed or unlisted debt instruments, as permitted under SEBI Regulations. These would cover primary / secondary market purchases, Public Offers, private placements, rights offers, etc., subject to SEBI Regulations.
15. Securitised debt, pass through obligations, various types of securitisation issuances including but not limited to Asset Backed Securitisation, Mortgage Backed Securitisation, single loan securitisation and other domestic securitisation instruments, as may be permitted by SEBI / RBI from time to time.
16. Investments in debentures, bonds and other fixed income securities will usually be in instruments, which have been assigned investment grade ratings by an approved rating agency. The instruments may be rated / unrated and listed / unlisted. In cases where the debt instrument is unrated, specific approval from the Investment Committee of RCAM shall be obtained. 20. The scheme may invest in the liquid schemes launched by SEBI registered Mutual Fund or schemes that invest predominantly in money market instruments / securities.

(i) CREDIT EVALUATION POLICY FOR INVESTMENTS IN DEBT SECURITIES

Credit evaluation is a continuous process. It applies not only for issuers where investments are being evaluated for the first time but also for those where we already have credit exposures.

In a detailed credit evaluation process, the following aspects are covered.

1. An in-depth review of the sector in which company operates. In this process, research team also measures the micro and macro risks associated with the sector and its possible impact on the overall business environment of the issuer. In addition, issuer's market position is evaluated vis-à-vis competition.
2. Issuer analysis involves both qualitative and quantitative aspects.

- a. Qualitative analysis is related to quality of management, corporate governance, promoter background, parents support etc. Any synergy / cross dependence with any of the other promoter companies is also scrutinized.
- b. Quantitative analysis is related with balance sheet management, profitability indicators, ratio analysis, capex programmes, growth plans, leverage and cash management policy etc.
3. The due diligence process involves both primary and secondary sources for research.
 - a. Secondary sources of information like publicly available data including annual reports and other public filings, rating and other research reports, industry research reports are studied in detail.
 - b. Primary research activities like direct interaction with the issuer at various levels, interaction with the rating agencies, the company's bankers, competitors in the industry and stock market participants (market intelligence), is given a very high weightage.
4. Both for plain vanilla transactions and especially for structured transactions, legal due diligence is an integral part of the overall risk evaluation policy. Depending on the scope and complexity of transactions both internal as well as external legal exercises are undertaken. Based on the above analysis, the credit research team presents a case for investing / avoiding investments for any new issuer / structure. Post these discussions formal proposals are prepared for issuers / structures where limits are being sought. The approval for such limits is sought, based on certain criterion that is laid out as part of the investment policy. Depending on the rating, tenure, and proposed exposures, approvals are taken at the Head of Fixed Income / Investment Committee / Board levels. As mentioned earlier, credit evaluation is a continuous exercise. For all issuers / structures where we have current exposures regular evaluation is carried out on a periodic basis. The periodicity of such evaluation depends on the exposure, credit comfort on the said issuer / structure and the overall credit environment. Apart from regular credit updates both internally and at the Investment Committee levels, the board is also appraised on a periodic basis, on all the credit exposures, their performance and the credit department's views on them going forward.

(ii) LIST OF SECTORS WHERE RCAM / RMF WOULD NOT BE INVESTING

The scheme will not invest in Gems & Jewellery sector and airline sector.

(iii) TYPE OF INSTRUMENTS IN WHICH THE SCHEMES PROPOSE TO INVEST

***Some of the instruments may also be rated.**

It may be noted that detailing of credit rating/instruments shall be made similar to the current format as indicated above

There shall be no variations between intended portfolio allocation as may be issued at the time of launch and final portfolio except on account of

1. The scheme shall endeavour to invest in instruments having credit rating as indicated above or higher.

As per SEBI circular CIR/MIRSD/4/2011 dated June 15, 2011, Modifier "+"(plus) or "-"(minus) can be used with the rating symbols as they reflect the comparative standing within the category. For eg: in case AA has been mentioned, it will include AA- as well as AA+. In case an instrument has more than one publicly available rating, the more conservative rating will be considered for the purpose of investment.

For external factors such as revision in credit rating of instruments, valuation of security, etc. It may be noted that

 - All the investment rating etc will be considered at the time of making the investments only i.e at the time of deployment (for the purpose of comparison).
 - Post deployment in case of subsequent rating action in any securities which leads to negative deviation from the intended asset allocation, the fund manager shall rebalance the portfolio within time period of 30 days to align it with the intended portfolio allocation provided such rebalancing does not adversely impact the interest of the investors
2. In case desired maturity and credit quality CP/NCDs are not available or also on the basis of the risk reward analysis, the scheme may invest in Bank CDs of highest rating (A1+ or equivalents)/CBLOs/Reverse Repos (excluding repo in corporate bonds) /T-Bills. Such deviation may continue till suitable instruments of desired credit quality are not available.
3. Further, the above allocation may vary during the tenure of the scheme. Some of these instances are: (i) Coupon inflow / principal inflow / unexpected cash flow during the tenure of the scheme; (ii) the instrument is called or bought back by the issuer (iii) in anticipation of any adverse credit event (iv) Non availability of any instrument and on risk reward analysis. In case of such deviations,

the scheme may invest in Bank CDs (A1+ or equivalents) / CBLOs/ Reverse Repos (excluding repo in corporate bonds)/ G-sec / T-Bills / Liquid schemes. Such deviation may continue till maturity, if suitable instruments of desired credit quality are not available. In case where cash is generated in the above instances and is deployed in short term deposits, such deployment will only be for temporary parking in line with SEBI regulations.

4. In case of individual securities maturity prior to the maturity date of the scheme and at the time of construction of the portfolio, investments may be made in cash and cash equivalents such as CBLO, Repo (excluding repo in corporate bonds), T-Bills, Liquid Schemes, CDs and short term bank Deposits
5. In case where investments in any Unrated Instruments is indicated and if they are not available, the scheme may invest in Bank CDs (A1+ or equivalents) / CBLOs/ Reverse Repos (excluding repo in corporate bonds)/ G-sec / T-Bills / Liquid schemes / AAA rated instruments. The scheme shall not invest more than 10% of its NAV in unrated debt instruments issued by a single issuer and the total investment in unrated instruments shall not exceed 25% of the NAV of the scheme.
6. RCAM will ensure that total exposure of the scheme in a particular sector (excluding investments in Bank CDs, short term deposits of scheduled commercial banks, CBLO, G-Secs, T-Bills and AAA rated securities issued by Public Financial Institutions and Public Sector Banks and such other instruments if any, as may be specified by SEBI from time to time) shall not exceed 30% or such other percentage of the net assets of the scheme, as prescribed by SEBI from time to time.
An additional exposure to financial services sector (over and above the limit of 30%) not exceeding 10% of the net assets of the scheme shall be allowed by way of increase in exposure to Housing Finance Companies (HFCs) rated AA and above and registered with National Housing Bank (NHB). However, such total investment/ exposure in HFCs shall not exceed 30% of the net assets of the scheme or such other percentage of the net assets of the scheme, as prescribed by SEBI from time to time.
Further, to clarify please note that all the above mentioned provisions and investments made in line with the above mentioned circumstances/variations are independent of this scenario (30% sector limit and exceptions on the same as detailed in point No. 6).
7. The range as indicated in the intended portfolio allocation depending on the risk return profile of the portfolio and subject to the availability of the securities, the fund manager may increase the allocation for AAA rated securities, while ensuring range of other securities is proportionately adjusted.

It may be noted that the intended portfolio allocation will be determined at the time of launch of the scheme whereas the final portfolio for the purpose of determining deviations, if any, will be considered after 30 days from the allotment. Basis the same, RCAM will report in the next meeting of Board of Directors of Reliance Capital Asset Management Limited (RCAM) and Reliance Capital Trustee Co Limited the publicized percentage allocation and final portfolio.

For unlisted / non traded securities, where sector classification does not exist, RCAM will have the discretion to decide the classification as per their best judgment.

The aforesaid limits shall not be applicable to term deposits placed as margins for trading in cash and derivatives market.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The fund management team will endeavor to maintain a consistent performance in the scheme by maintaining a balance between safety, liquidity and profitability aspects of various investments. The fund manager will try to achieve an optimal risk return balance for management of the fixed income portfolios.

The investments in debt instruments carry various risks like interest rate risk, liquidity risk, default risk, purchasing power risk etc. While they cannot be done away with, they can be minimized by diversification and effective use of hedging techniques.

The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets.

Investment views / decisions will be taken on the basis of the following parameters:

1. Prevailing interest rate scenario
2. Quality of the security / instrument (including the financial health of the issuer)
3. Maturity profile of the instrument
4. Liquidity of the security
5. Growth prospects of the company / industry
6. Any other factors in the opinion of the fund management team

Risk Mitigation Factor /Control: The Fund Management proposes to use analytic risk management tools like VAR / convexity/ modified duration for effective portfolio management.

Debt Market in India:

The Indian Debt market is facing major shift in the recent times. The substantial growth in Mutual Fund collections in the past few years have provided an easy route for the investors to channelise their savings into the debt market, which otherwise is largely dominated by Banks and other Institutional investors.

At present, the Indian debt market is dominated by issues of Central Government bonds, Corporate Debentures and PSU Bonds. The other instruments available for investment are Commercial Papers, Certificate of Deposits, Government guaranteed bonds, etc.

Brief details about the instruments are given below as on July 31, 2015.

Instruments	Listed/ Unlisted	Current Yield Range As on July 31, 2015	Liquidity	Risk profile

Call Money	Unlisted	5.50%- 7.30%	High	Low
Mibor linked Papers	Listed	130-132 bps	Low	Low

A brief description about yields presently available on Central Govt. Securities /Bonds & Debentures of various maturities is as follows: Annualised yields (as July 31, 2015) are:

The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario, etc. Also, the price and yield varies according to maturity profile, credit risk etc.

Disclosures with respect to securitized debt

1. How the risk profile of securitized debt fits into the risk appetite of the scheme

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However it differs in following two majorly respects :-

Typically the liquidity of securitized debt is less than similar debt securities. However, this is expected to change as SEBI has issued its guidelines on listing of securitized instrument and going forward we expect more issuance of listed securitized debt.. Currently, the fund manager normally buys these with the view to hold them till maturity. For the close ended scheme, the average tenure of the securitized debt would not exceed maturity of the Scheme / Plan / Fund. For open ended scheme, average maturity of the securitized debt will be in accordance with the investment time horizon of such scheme, opportunities available in the market and interest rate views of the investment team.

For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged. The fund manager price the securitized debt accordingly to compensate for reinvestment risk.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. If the fund manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt according to the nature (open ended / close ended) of the scheme.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

Originators have been broadly categorized as follows:

- PSU Banks;
- Private Banks;
- NBFC's with asset size of Rs. 1,000 crores and above; and
- NBFC's with asset size of below Rs. 1,000 crores.

Before the assessment of the structure is undertaken, the originators/ underlying issuers are evaluated on the following parameters:

- Track record – good track record of the originators/ underlying issuers or its group companies.
- Willingness to pay – credible and strong management team.
- Ability to pay – good financials and business profile.
- Risk appraisal capabilities – strong and well defined risk assessment processes
- Business risk assessment of the originators based on the following factors:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Company specific factors

In addition a detailed review and assessment is done including interactions with the company as well as the credit rating agency. Typically we would avoid investing in securitization transaction (without specific risk mitigant strategies / additional cash/security collaterals/ guarantees) if we have concerns on the following issues regarding the originator / underlying issuer:

- Default track record/ frequent alteration of redemption conditions / covenants;
- Very High leverage ratios of the ultimate borrower (for single-sell downs) – both on a standalone basis as well on a consolidated level;
- Very High proportion of reschedulement of underlying assets of the pool or loan, as the case may be;
- Very High proportion of overdue assets of the pool or the underlying loan, as the case may be;
- Poor reputation in market;
- Insufficient track record of servicing of the pool or the loan, as the case may be;
- The degree of NPAs of the company being very high than the industry trends.

Further, investments in securitized debt will be done in accordance with the investment restrictions specified under the Regulations / this Scheme Information Documents which would help in mitigating certain risks. Currently, as per the Regulations, the Scheme cannot invest more than 15% of its net assets in debt instruments (irrespective of residual maturity) issued by a single issuer which are rated not below investment grade by a credit rating agency. Such investment limit may be extended to 20% of the net assets of the Scheme with the prior approval of the Board of Trustees.

3. Risk mitigation strategies for investments with each kind of originator

An analysis of the originator / Issuer is especially important in case of retail loans as the size and reach affects the credit quality and servicing of the securitized instrument. In case of securitization involving single loans or a small pool of loans, the credit risk of the underlying borrower is analyzed. In case of diversified pools of loans, the overall characteristic of the loans is analyzed to determine the credit risk. The credit analyst looks at seasoning (i.e. how long the loan has been with the originator before securitization) as one way of evaluating the performance potential of the PTC. Securitization transactions may include some risk mitigants (to reduce credit risk). These may include interest subvention (difference in interest rates on the underlying loans and the PTC serving as margin against defaults), overcollateralization (issue of PTCs of lesser value than the underlying loans, thus even if some loans default, the PTC continues to remain protected), presence of an equity / subordinate tranche (issue of PTCs of differing seniority when it comes to repayment – the senior tranches get paid before the junior tranche) and / or guarantees.

Investments in securitized debt will be done based on the assessment of the originator which is carried out by the Fixed Income team. In order to mitigate the risk at the issuer/originator level, the Fixed Income team will consider various factors which will include:

- size and reach of the issuer /originator
- Set up of the organization structure of the issuer /originator
- the infrastructure and follow-up mechanism of the issuer /originator
- the issuer / originator's track record in that line of business
- quality of information disseminated by the issuer/originator; and
- the Credit enhancement for different type of issuer/originator

Table 1: illustrates the framework that will be applied while evaluating investment decision relating to a securitization transaction:

"Characteristics/Type of Pool"	"Mortgage Loan "	Commercial Vehicle and Construction Equipment	CAR	2Wheelers	Micro Finance	Personal Loans	Single Loan Sell Downs / Others

Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

In retail securitized debt investments, we will invest majorly in asset backed pools such as Medium and Heavy Commercial Vehicles, Light Commercial Vehicles (LCV), Cars, and Construction Equipment etc. Where we invest in Single Loan Securitization, as the credit is on the underlying issuer, we focus on the credit review of the borrower. A credit analyst sets up limit for various issuers based on independent research taking into account their historical track record, prevailing rating and current financials. In addition to the framework as per the table above, we also take into account following factors, which are analyzed to ensure diversification of risk and measures identified for less diversified investments:

- Size of the loan: In retail loans securitisation, the major risk diversification is achieved on account of granularity i.e. higher number of contracts available. However, excessive reliance on very small ticket size should be avoided as it may result in difficult and costly recoveries.
- Original maturity of the pool: Ideal original maturity of the contract varies for different retail loans. For Cars / Commercial Vehicles / Construction Equipment, it lies around 60 months while for mortgage, it lies around 240 months. For microfinance loans, it lies around 12 months. Lower original maturity for asset backed retail loans means faster buildup of borrowers' equity into the asset as well as his higher borrowing capacity.
- Loan to Value Ratio: Loan to Value ratio means value of the loan taken compared to value of the assets offered as security. In case of secured loan, higher Loan to Value ratio means higher probability of losses in case asset is repossessed and sold in case of delinquency. We prefer contracts with lower loan to value ratio than higher loan to value ratio.
- Seasoning of the pool: Higher the time period the contracts have remained with the originator / issuer, the lower is the default risk on such contracts. This is because of the higher buildup of borrower's equity into the asset as the time gradually passes. We prefer higher seasoned contracts than lower seasoned contracts.
- Current performing pools: We normally ensure that majority of the contracts in the pools are current to reduce default rate.. The rationale here being, as against current performing contract, the overdue contracts are certainly in higher risk category.
- Geographical Distribution: Regional/state/ branch distribution is preferred to avoid concentration of assets in a particular region/ state/branch.
- Default Rate Distribution: We prefer branches/ states where default rate is less than branches/ states where default rates are high to avoid concentration of assets from poor performing regions.
- Risk Tranching: Typically, we would avoid investing in mezzanine debt or equity of Securitized debt in the form of sub ordinate tranche, without specific risk mitigant strategies / additional cash / security collaterals/ guarantees, etc.
- Credit Enhancement Facility: We prefer credit enhancement which is in form of cash / bank guarantee than in the form of over-collateralization of the pool / excess interest spread available in the pool. The rationale here being, as against cash collateral, excess interest spread / overcollateralization collateral fluctuate in line with performance of the pool. When the performance of the pool deteriorates, there is lesser current collateral available on account of over- collateralization of the pool / excess interest spread available than the original envisaged one.
- Liquid Facility: In many retail asset classes like commercial vehicle, there can be some delay in payment from borrower due to pressure on its working capital. However, this delay usually does not go beyond 5-6 months as in the meantime he receives payment from his customers and clear his overdue portion of the loan. In that kind of asset classes, we prefer pool with liquid facility as it balances the intermittent liquidity requirement of the pool.
- Structure of the Pool: Structure of a transaction can either be at par or at a premium, depending on whether the pool principal is sold at par or at a premium to investors. We prefer pool where it is sold on par basis.

5. Minimum retention period of the debt by originator prior to securitization

For investments in PTCs, where the assets have been pooled, the minimum retention period for each of the contract should be 1 month with a average tenure of upto 24 months and 2 months for contracts with a average tenure of more than 2 years. For overall minimum retention period, please refer to Table 1.

6. Minimum retention percentage by originator of debts to be securitized

Pl refer to Table 1 which illustrates additional collaterals taken against each type of asset class, which is preferred over the minimum retention percentage by the originator of the loan. The rationale is that collateral is available at all points of time and is available at all point of times in case of any fructification of any probable losses where in retention percentage keeps running down as time passes and may not be fully available in case of any fructification of any probable losses

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the scheme in any asset are done based on the requirements of the scheme and is in accordance with the investment objectives and the asset allocation pattern of a fund. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). The robust credit process ensures that there is no conflict of interests when a scheme invests in securitized debt of an originator and the originator in turn makes investment in that particular scheme.

There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest. In addition to internal controls in the fixed income investment process, there is regular monitoring by the risk management group and investment committee. Normally the issuer who is securitizing instrument is in need of money and is unlikely to have long term surplus to invest in mutual fund scheme.

Furthermore, there is clear cut segregation of duties and responsibilities with respect to Investment function and Sales function. Investment decisions are being taken independently based on the above mentioned parameters and investment by the originator in the fund is based on their own evaluation of the fund vis a vis their investment objectives .

8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt.

The risk assessment process for securitized debt, as detailed in the preceding paragraphs, is same as any other credit. The investments in securitized debt are done after appropriate research by credit analyst. The ongoing performance of the pool is monitored to

highlight any deterioration in its performance.

The resources for and mechanisms of individual risk assessment with the AMC for monitoring investment in securitized debt are as follows:

- Fixed Income Team – Risk assessment and monitoring of investment in Securitized Debt is done by a team comprising of Credit Analyst, Head of Fixed Income and Head of Credit Research
- In addition to internal controls in the fixed income investment process, there is regular monitoring by the risk management group and investment committee.
- Ratings are monitored for any movement – Based on the the interaction with the credit rating agency and their performance report, ratings are being monitored accordingly.
- Wherever the funds portfolio is disclosed, the AMC may give a comprehensive disclosure of Securitised debt instruments held in line with SEBI requirement.

Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

Derivatives and Hedging Products:

The scheme may use derivative instruments like Interest rate swaps, Forward rate agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing as may be permitted under the Regulations and Guidelines.

An interest rate swap is a financial contract between two parties exchanging a stream of interest payments for a notional principal amount on multiple occasions during a specified period. Typically, one party receives a pre-determined fixed rate of interest while the other party, receives a floating rate, which is linked to a mutually agreed benchmark with provision for mutually agreed periodic resets. The fund intends to use derivatives for hedging & portfolio balancing as permitted under the SEBI Regulations & Guidelines. To hedge & balance the portfolio derivative instruments like interest rate swaps & forward rate agreements would be used to create synthetic fixed rate bonds/ floating rate bonds. We wish to submit that, creation of synthetic fixed rate bonds/floating rate bonds is a hedging and portfolio rebalancing technique. An example is stated below to explain the said proposition.

Swaps can be used to create synthetic fixed rate instruments – Let us take the example of a 3 Yr floating rate bond with a spread of 50 bps (basis points) over a benchmark. Ordinarily, this fetches the investor a yield of the benchmark (which is floating) plus 50 bps on an annualized basis. However, by receiving the 3 yr fixed rate on the swap side, what happens is that the bond gets converted into a fixed rate bond. Let us assume that the 3 yr swap on the same benchmark is received for the same principal amount at the rate 7.25%. Broadly then, the investor receives fixed cash flows of 7.25%, pays the floating benchmark rate, and receives the floating rate of the bond (which comprise the benchmark rate and the "spread" of 50 bps). The floating cash flows of the benchmark cancel each other out and the investor is left with a synthetic fixed rate bond yielding him 7.75% (7.25% plus the 'spread' of 50bps). Thus through the swap, the floating rate bond gets converted 'synthetically' into a fixed rate bond.

Accounts are generally settled on a net basis on predetermined settlement dates. Accordingly, on each agreed payment date, amounts owed by each party is calculated by applying the agreed rate i.e. fixed in one case and floating in the other, on the notional amount. The party who owes the higher amount i.e. the difference between the interest rate amount and the floating interest rate amount or vice versa, makes a payment of the net amount. No principal amount is exchanged. Generally, interest rate swaps involve exchange of a fixed rate to a floating rate of interest or vice versa. These are known as Plain Vanilla Swaps. The RBI has currently allowed only these swaps in the Indian market.

Example – The most common type of swaps is where one party agrees to pay a fixed rate of interest (fixed-rate payer) to the other party who agrees to pay a floating rate of interest (floating-rate payer). The payments are exchanged on designated dates during the life of the contract at agreed rates.

Suppose, the view on interest rate is that they would come down over the next three months if a particular investment is yielding a rate of return at 10% p.a. currently, the Fund Manager would like to lock-in this rate of return which in a downward interest rate scenario would appear attractive.

He, then, enters into a swap transaction with a counterparty that is willing to pay a fixed rate of 10% p.a. and accept a floating rate linked to say, MIBOR which would vary everyday but is currently at 7% p.a. The transaction would be represented thus: Receives fixed rate @ 10% p.a.

RMF Counterparty B

Pays Floating Rate MIBOR

Note – No principal amount is exchanged. A notional principal amount is agreed upon for interest calculation purposes. Only the difference between the two rates is exchanged at agreed intervals or payment dates. When fixed interest rate amount is higher, the fixed rate payer pays the difference amount i.e. fixed interest rate amount minus the floating interest rate amount or vice-versa

Forward Rate Agreements (FRAs)

FRA is a financial contract between parties agreeing to exchange interest payments for a notional principal amount on settlement dates for a specified period from start date to maturity date.

Example: Suppose, RMF has funds to invest after two months for a period of three months. The Fund Manager expects interest rates to soften in the next two months. He, therefore, would like to lock-in the interest rate today for his investment to be made after two months. The instrument in which he wishes to invest is a 91-day Treasury Bill at 8.25% p.a. He, therefore, enters into an agreement where he sells a 2 x 5 FRA for a notional principal amount. 2 represent the start date of the FRA and 5 represents the maturity date or end date.

The details will be as under:

Asset: 91-day T' Bill

Tenure: 3 months commencing from 2 months from date of agreement.

Indicative 2 x 5 : 8.25% p.a.

Benchmark: 91-day T' Bill cut-off yield on the last auction preceding settlement date

So RMF receives 8.25% p.a. on the notional amount on settlement date. Counterparty will receive 91-day T' Bill cut-off rate on the 91-day T' Bill auction, on the auction just preceding the settlement date.

Both, IRS and FRAs can be thus effectively used as hedging products for interest rate risks.

Risk Factors – Derivatives products carry the credit risk (risk of default by counterparty), market risk (due to market movements) and liquidity risk (due to lack of liquidity in derivatives). No principal amount is exchanged. A notional principal amount is agreed upon for interest calculation purposes. Only the difference between the two rates is exchanged at agreed intervals or payment dates. When fixed interest rate amount is higher, the fixed rate payer pays the difference amount i.e. fixed interest rate amount minus the floating interest rate amount or vice-versa.

Example: The most common type of swaps is where one party agrees to pay a fixed rate of interest (fixed-rate payer) to the other party who agrees to pay a floating rate of interest (floating-rate payer). The payments are exchanged on designated dates during the life of the contract at agreed rates.

Suppose, the view on interest rate is that they would come down over the next three months if a particular investment is yielding a rate of return at 10% p.a. currently, the Fund Manager would like to lock-in this rate of return which in a downward interest rate scenario would appear attractive.

He, then, enters into a swap transaction with a counterparty that is willing to pay a fixed rate of 10% p.a. and accept a floating rate linked to say, MIBOR which would vary everyday but is currently at 7% p.a. The transaction would be represented thus: Receives fixed rate @ 10% p.a.

In terms of SEBI Circular Cir/IMD/DF/11/2010 dated August 18, 2010, following shall be applicable:

1. The cumulative gross exposure through debt and derivative positions should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
4. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

F. FUNDAMENTAL ATTRIBUTES

Following are the Fundamental Attributes of the scheme, in terms of Regulation 18 (15A) of the SEBI (MF) Regulations:

(1) TYPE OF SCHEME:

A Close Ended Income Scheme

(2) INVESTMENT OBJECTIVES:

- a. The primary investment objective of the scheme is to seek to generate returns and growth of capital by investing in a diversified portfolio of the following securities maturing on or before the date of maturity of the scheme with the objective of limiting interest rate volatility –
 - Central and State Government securities and
 - Other fixed income/ debt securities

However, there can be no assurance or guarantee that the investment objective of the scheme will be achieved.

- b. **Investment pattern – Refer to Section II – C: "How will the Scheme allocate its assets?"**

(3) TERMS OF ISSUE

- a) **Liquidity provisions such as listing, repurchase and redemption** – The Regulations require that every close end scheme (except Equity Linked Saving Scheme) shall be mandatorily listed on a recognised stock exchange. The units of the plan under the scheme will be listed on the Bombay Stock Exchange Ltd. (BSE) or other stock exchanges as may be decided by RCAM from time to time. However the trustees reserve the right to list the units of the plan on any other Stock Exchange. Since units are proposed to be listed on the BSE, an investor can buy/sell units of the Plan under the Scheme on a continuous basis on the BSE and other recognized stock exchanges where units will be listed.

Investors holding the units by way of an account statement (physical form) will not be able to redeem their units during the tenure of the Scheme and there will be redemption by the fund on the maturity of the Scheme. However the units held in dematerialized form can be traded on the Stock Exchange.

The requirement of minimum investment will not be applicable on listing of units. The trading lot is one unit of the Plan. Investors can purchase units at market prices, which may be at a premium /discount to the NAV of the scheme depending upon the demand and supply of units at the exchanges.

Buying / selling units on the stock exchange are just like buying / selling any other normal listed securities. If an investor has bought units, an investor has to pay the purchase amount to the broker /sub-broker such that the amount paid is realised before the funds pay-in day of the settlement cycle on the exchange. If an investor has sold units, an investor has to deliver the units to the broker/sub broker before the securities pay-in day of the settlement cycle on the exchange.

- b) **Aggregate fees and expenses charged to the Scheme:**

New Fund Offer (NFO) Expenses

Refer to Section IV – A : New Fund Offer (NFO) Expenses.

Annual Scheme Recurring Expenses

Refer to Section IV – B : Annual Scheme Recurring Expenses.

- c) **Any safety net or guarantee provided** – Not Applicable

In accordance with Regulation 18(15A) of the SEBI (MF) Regulations, the Trustees shall ensure that no change in the fundamental attributes of the Scheme(s) and the Plan(s) / Option(s) there under or the trust or fee and expenses payable or any other change which would modify the Scheme(s) and the Plan(s) / Option(s) there under and affect the interests of Unitholders is carried out unless:

- i. A written communication about the proposed change is sent to each Unitholder and an advertisement is given in one English daily newspaper having nationwide circulation as well as in a newspaper published in the language of the region where the Head Office of the Mutual Fund is situated; and
- ii. The Unitholders are given an option for a period of 30 days to exit at the prevailing Net Asset Value without any exit load.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Crisil Composite Bond Fund Index

The scheme intends to have similar instruments as constituted in Crisil Composite Bond Fund Index as applicable for the scheme. The portfolios are similar not only in term of the construct but also in terms of risk return parameters in question. Using this benchmark shall provide the investor with an independent and representative comparison with the fund portfolio.

Internal Norms for Investment Restrictions :

At RMF, to ensure robust risk management and adequate portfolio diversification internal Investment policy for various debt schemes has been framed. The investment policy at RMF specifies limits both on overall basis (across all schemes) as well as on individual scheme level. Guidelines for following parameters for liquid as well as non liquid schemes have been specified in the policy:

1. Eligible Instruments: Defines the eligible instruments where the scheme can invest
2. Minimum Liquidity: Defines the instruments considered as liquid instruments and the minimum investments in these instruments as a percentage of total net assets
3. Maximum Illiquid component: Defines the instruments considered as illiquid and the maximum investment that can be made in these instruments as a percentage of net assets.
4. Rating: Defines minimum and/ or maximum investment in a particular rating as a percentage of total portfolios.
5. Maturity: Defined the weighted average maturity of a portfolio. Also defines the weighted average maturity, maximum and maturity for certain asset types like corporate bond, Gilts etc.

The Trustee Company / AMC may alter these above stated limitations from time to time, and also to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments in order to achieve its investment objectives & policies. As such all investments of the Scheme shall be made in accordance with the Regulations, including Schedule VII thereof, and the Fundamental Attributes of this Scheme.

INVESTMENT BY THE AMC IN THE SCHEME:

In line with SEBI Regulations and circulars issued by SEBI from time to time, the AMC may invest its own funds in the scheme(s), subject to disclosure being made in the Scheme Information Documents (s). Further, the AMC shall not charge any fees on its investment in the Scheme (s), unless allowed to do so under SEBI Regulations in the future

Accordingly, investments in certain Pass Through Certificates ("PTC's") of a securitization trust ("the Trust") were made through some of schemes of Reliance Mutual Fund ("the Fund"). The Fund in consultation with its tax & legal advisors has contested the applicability of such demand and proceedings there on are still pending. It may be noted that this is a matter, which is not restricted only to the Fund but is an Industry issue. Accordingly, through the Association of Mutual Funds in India (AMFI), the matter has also been appropriately escalated to the Ministry of Finance, in order to seek necessary clarifications, reliefs and if required, to carry out necessary amendments to the relevant provisions of the Income Tax Act, 1961.
