I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

1. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the Plan invests fluctuates, the value of your investment in the Plan may go up or down.
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Plan.
4. UTI-Capital Protection Oriented Scheme – Series VIII - I (1278 days) is only the name of the Plan and does not in any manner indicate either the quality of the Plan or its future prospects or returns. There may be instances where no dividend distribution could be made. The Plan offered is “oriented towards protection of capital” and “not with guaranteed returns” and the orientation towards protection of the capital originates from the portfolio structure of the Plan and not from any bank guarantee, insurance cover etc.
5. **UTI-Capital Protection Oriented Scheme – Series VIII - I (1278 days)** is not a guaranteed or assured return Plan.
6. The sponsors are not responsible or liable for any loss resulting from the operation of the Plan beyond the initial contribution of ₹10,000/- made by them towards setting up the Fund.
7. Statements/Observations made in this Scheme Information Document are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, dividend and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Plan may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures. Unitholders in the Plan are not offered any guaranteed returns.
10. Mutual Funds and securities investments are subject to market risks and the NAVs of the units issued under the Plan may go up or down depending on the factors and forces affecting the capital markets.
11. Although it is intended to seek capital protection on maturity by investing in fixed income securities maturing on or before the tenure of the Plan and seeking capital appreciation by investing in equity and equity related instruments, investors may note that AMC/Fund Manager’s investment decisions may not be always profitable. Further, the performance of the Plan may not always match the market performance.

12. Risk Factors specific to Debt Markets

Credit Risk: Bonds /debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit/ default risk in view of the sovereign status of the issuer.

Interest-Rate Risk: Bonds/ Central Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI and the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and the increase or decrease in the level of interest rates. The prices of Bonds/Central Government securities are also influenced by the liquidity in the financial system and/or the open market operations (OMO) by RBI. Pressure on exchange rate of the Rupee may also affect security prices. Such rise and fall in price of bonds/central government securities in the portfolio of the plan may influence the NAV of the Plan as and when such changes occur. For a close ended Plan, where the maturity of the debt securities in the portfolio is in line with the maturity period of the Plan, the interest rate risk may not be there, if the investment is held upto maturity.

Price Risk: As long as the Plan will be invested, its Net Asset Value (NAV) is exposed to market fluctuations, and its value can go up as well as down. The portfolio of fixed-income securities that the Plan invest in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. In general, price of fixed-income securities go up when interest rates fall, and vice versa.

Market Risk: The Plan may be subject to price volatility due to such factors as interest sensitivity, market perception or the creditworthiness of the issuer and general market liquidity

Liquidity Risk: The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the Plan might have to incur a significant “impact cost” while transacting large volumes in a particular security. A lower level of liquidity affecting an individual security(ies) or an entire market may have an adverse bearing on the value of the Plan’s assets. This may more importantly affect its ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell stocks in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments.

Risk relating to investment pattern: The Plan would invest only in AAA rated debt which is comparatively less risky (in credit risk terms) than those rated lower (say AA or A).

Risks relating to duration: Fixed Income securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

Non-diversification Risk: The Plan may pursue a reasonable degree of diversification adhering to the SEBI guidelines on limits for investments in a single sector, limits on investments in securities issued by a single issuer etc. It may invest a greater proportion of assets in the securities of one issuer / single sector (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the Plan. The Plan may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Plan.

Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Plan are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

1. **Risk Factors specific to Equity Markets**

Stock Market Volatility: Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Different parts of the market can react differently to these developments. The stock-specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market cap category.

Equity Price Risk: Stock prices may rise or decline based on a number of factors. These could be a combination of company-specific and system-specific factors. Their impact on different types of stocks may vary. Prices change due to events that impact entire financial markets or industries (for example, changes in inflation, consumer demand, supply situation and GDP growth). Company specific factors may include the likes of success or failure of a new product, mergers, takeovers, earnings announcement and changes in management, to name a few. Securities owned by the Plan may offer opportunities for growth because of high potential earnings growth; they may also involve greater risks than securities that do not have the same potential.

Dependency Risk: The Plan may invest in stocks and mutual funds and exchange-traded funds linked to stocks. Equity confers a proportionate share of the ownership of a company. Its value will depend on the success of the company’s business, income paid to stockholders by way of dividend, the value of the company’s assets, quality of its corporate governance practice, its attractiveness relative to peers and general market conditions. The fund may also invest in convertible securities and warrants. Convertible securities generally are fixed-income securities or preference shares that may be converted into common stock after a prescribed period.

Temporary Investment Risk: If the fund manager is of the view that market or economic conditions may become unfavourable for investors in equities, he may invest a higher proportion of the fund’s assets in short-term and medium-term fixed income instruments as well as near-cash equivalents. This may be a defensive and temporary strategy. The fund manager may also adopt such a strategy while zeroing in on appropriate investment opportunities or to maintain

liquidity. At times, such investments may lead to lower returns. In these circumstances, the Plan may be unable to achieve its investment goal.

Non-diversification Risk: The Plan may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of one issuer (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the Plan. The Plan may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Plan.

Asset-Class Risk: Stocks have historically outpaced other asset classes such as gold, fixed deposits and bonds, to name a few, over the long term in India. Individual stocks prices may, however, tend to rise and decline in a dramatic manner. Such price movement may be due to company-specific aspects or factors such as inflation, interest rates and growth rates that affect the securities market in entirety. A slowdown in growth or a partial or full-blown recession may have a negative impact on prices of most stocks owned by the Plan.

14. **Money Market Securities** are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

15. **Trading in equity derivatives involves certain specific risks like:**

- a. **Credit Risk:** This is the risk on default by the counter party. This is usually to the extent of difference between actual position and contracted position. This risk is substantially mitigated where derivative transactions happen through clearing corporation.
- b. **Market Risk:** Market movement may also adversely affect the pricing and settlement of derivative trades like cash trades.
- c. **Illiquidity Risk:** The risk that a derivative product may not be sold or purchased at a fair price due to lack of liquidity in the market.
- d. An exposure to derivatives can lead to losses. Success of dealing in derivatives depends on the ability of the fund manager to correctly assess the future market movement and in the event of incorrect assessment, if any, performance of the Plan could be lower.
- e. Participating in derivatives is a highly specialised activity and entails greater than ordinary investment risks. Notwithstanding such derivatives being used for limited purpose of hedging and portfolio balancing, the overall market in these segments could be highly speculative due to the action of other participants in the market.
- f. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.

UTI- CPOS-Series VIII – I (1278 days)

No assurance can be given that the fund manager will be able to identify or execute such strategies.

- g. The risk associated with the use of derivatives is different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments.

16. The aggregate value of “illiquid securities” of the Plan, which are defined by SEBI as non traded, thinly traded and unlisted equity shares, shall not exceed 15% of the total assets of the Plan and any illiquid securities held above 15% of the total assets shall be assigned zero value.

The proposed aggregate holding of assets considered “illiquid”, could be more than 10% of the value of the net assets of the Plan.

In case of the need for exiting from such illiquid instruments in a short period of time, the NAV of the Plan could be impacted adversely.

17. Risk associated with Close Ended Scheme

In a close ended scheme, redemption / repurchase shall not be allowed prior to maturity of the Scheme. Redemption will be allowed only on maturity of the Scheme. Scheme will mature at the end of the close ended period. For liquidity purpose units of the scheme are to be listed on Stock Exchange. Investors who wish to trade on the exchange and Investors wishing to exit / redeem before the scheduled maturity may do so through stock exchange mode where the scheme will be listed. For the units listed on the exchange it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units and investor may not get the desired return. Also there may not be sufficient liquidity on the stock exchange for the investors to exit from the stock exchange mode.

18. Plan Specific Risk factors & Risk Mitigation measure:

- a. The Plan offered is “oriented towards protection of capital” and “not with guaranteed returns”. Further, the orientation towards protection of the capital originates from the portfolio structure of the Plan and not from any bank guarantee, insurance cover or guarantee / assurance from the Trustee / Investment Manager / Mutual Fund / Sponsor.
- b. The ability of the portfolio to meet capital protection on maturity to the investors can be impacted by interest rate movements in the market, credit defaults by bonds, expenses, credit risk, interest rate risk, liquidity risk, market risk, price risk, reinvestment risk and risks specific to closed ended Plans. The risks pertaining to equity and debt markets may also impact the NAV of the Plan. This is only an illustrative list and not an exhaustive one.
- c. The rating provided by CRISIL is not a comment on Net Asset Value of the Plan in relation to its face value, if units are redeemed anytime prior to the Plan’s maturity date.
- d. CRISIL reserves the right to suspend, withdraw or revise the above ratings at any time, on the basis of any new information or unavailability of

information or any other circumstances, which CRISIL believes may have impact on the above ratings.

- e. The performance of the Plan may be affected by changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets.
- f. Investments in debt instruments are subject to default risk and interest rate risk. Interest rate risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the Plan may be subject to fluctuation.
- g. Though it is the endeavor of fund manager to invest in debt securities maturing in line with the maturity of the Plan there could be instances of not finding debt instruments with appropriate maturity date and hence there may be reinvestment risk. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate.
- h. Investors may note that AMC/Fund Manager’s investment decisions may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities.
- i. The value of the Plan’s investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Plan may fluctuate and can go up or down.
- j. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the equity and equity related investments made by the Plan which could cause the Plan to miss certain investment opportunities. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The inability of the Plan to make intended securities purchases due to settlement problems could also cause the Plan to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Plan’s portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to the Plan, in case of a subsequent decline in the value of securities held in the Plan’s portfolio.

UTI- CPOS-Series VIII – I (1278 days)

- k. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may choose to invest in unlisted securities that offer attractive yields. This may however increase the risk of the portfolio.
- l. The Plan may use various equity derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Usage of derivatives will expose the Plan to certain risks inherent to such derivatives.
- m. The Plan intends to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the Plan will be subject to credit risk as well as settlement risk, which might affect the liquidity of the Plan.
- n. Different types of securities in which the Plan would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the Plan's risk may increase or decrease depending upon its investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA (SO) rated are comparatively less risky than bonds which are AA rated.
- o. Redemption will be done on the maturity date at the Net Asset Value on the date of maturity. As per SEBI guidelines, the AMC/MF shall not redeem the units of the Plan before the date of maturity.

Risk Mitigation Measure :

As the said Plan is a close ended Plan investing in a diversified portfolio with no redemption till maturity, the risk factors mentioned above will be minimal.

Interest Rate Risk / Reinvestment Risk: Plan would manage the interest rate risk & reinvestment risk by adequately matching the duration of assets in line with the duration of Plan.

Credit Risk: Plan would predominantly invest in highly rated securities where there is an internal credit comfort which would reduce the probability of credit risk.

Concentration Risk: The Plan would have modest presence of issuers with reasonable limits which would mitigate the credit concentration risk.

Portfolio Risk: By monitoring the return deviation and adequately managing all the above risks namely interest rate risk, reinvestment risk & credit cum concentration risk the Plan would mitigate the overall portfolio risk.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE PLAN

The Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Plan. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the date of closure of the New Fund Offer.

2. Debt market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value : Stated value of the paper / Principal Amount

Coupon : Zero; fixed or floating

Frequency : Semi-annual; annual, sometimes quarterly

Maturity : Bullet, staggered

UTI- CPOS-Series VIII – I (1278 days)

Redemption : FV; premium or discount

Options : Call/Put

Issue Price : Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, CBLOs etc. They are mostly discounted instruments that are issued at a discount to face value.

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities include central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and of late Mutual Funds have also started hedging their exposures through these products.

(iii) Regulators:

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment Facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of security issuance and eligible investors:

(vi) Trading Mechanism:

Government Securities and Money Market Instruments

Currently, G-Sec trades are predominantly routed through NDS-OM which is a screen based anonymous order matching system for secondary market trading in Government Securities owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

The initial investment mix between the fixed securities and equity shall be such that the maturity value of the fixed income portfolio, at the time of Plan's maturity, net of all expenses is more than or equal to the face value of units issued. However, where any such change is warranted, such change shall be in line with the warranties prescribed by CRISIL. The investment manager would endeavor that the capital remains protected on maturity and also ensure that the Plan rating is not adversely affected.

Portfolio Turnover Policy

Portfolio Turnover is defined as the least of purchase or sales as a percentage of average size of a fund during any specified period of time. As sales and purchases of securities can be made on daily basis, it would be difficult to estimate with reasonable level of accuracy the likely turnover in portfolios. There could be instances of churning of portfolio to take advantage of trading opportunity existing in the market. But

it would be difficult to set the target for the portfolio turnover as it would be a function of purchases, general market conditions, trading opportunities, creation of liquidity to meet income distribution etc. The portfolio turnover shall be targeted so as to have return maximisation for the unitholders. At the same time, expenses such as brokerage and transaction cost shall be kept at low level so that it does not affect the earnings of the Plan.

Bank of Baroda

- (a) Bank of Baroda was one of the bankers to the public issue of shares of Jaltarang Motels Limited (“Jaltarang”). The issue opened for public subscription on December 21, 1995 and closed on December 26, 1995.

The prospectus issued by the Company categorically stated that the company’s shares would be listed on the stock exchanges at Ahmedabad and Bombay but permission for listing could be obtained only from Ahmedabad Stock Exchange (ASE).

While ASE accorded approval on March 4, 1996, Bombay Stock Exchange (BSE) rejected the request of the company (Jaltarang) for listing of shares. However, the Bank (Bank of Baroda), on March 25, 1996 transferred a sum of ₹ 38,89,218/- collected from the public, to the company’s (Jaltarang) account.

Since BSE had refused to list the company’s shares, the public issue became void in terms of section 73 of the Companies Act necessitating refund of the application money forthwith to the applicants.

The matter came to the notice of SEBI. To protect the interest of applicants SEBI, after holding an inquiry, by its order dated January 19, 2000 directed the bank to refund the sum of ₹ 4,031,018/- being the application money with interest at 15% from March 25, 1996 i.e. the day the bank allowed withdrawal of the funds by Jaltarang in respect of funds collected from the public issue.

The Bank preferred an appeal before the Securities Appellate Tribunal against the aforesaid order of SEBI. The tribunal, by its order dated July 27, 2000, rejected the appeal of the Bank. On which the bank filed an appeal (Appeal No.2 of 2000) before the High Court, Mumbai against the said order of the Tribunal. The High Court, Mumbai, on November 13, 2000, granted interim relief of stay of the operation of the orders dated July 27, 2000 of the Securities Appellate Tribunal and January 19, 2000 of SEBI and has further directed that the matter be placed on the board for final hearing.

Present Status: The matter is still pending with High Court Mumbai.

There are no further communication/queries from any regulatory authority to BOBCAPS in the matter.

- (b) The merchant banking division of the Bank of Baroda was the pre-issue lead manager for the public issue of shares of Trident Steels Limited ("Trident") in November, 1993.

SEBI issued a show cause notice dated April 29, 2004 calling upon the merchant banking division of the Bank to show cause why action should not be taken against it for failing in its duty to exercise due diligence in the above mentioned public issue. SEBI alleged that the merchant banking division of the Bank did not disclose the material fact that 750,000 shares out of the pre issue capital of Trident had been pledged by the directors and shareholders of those shares to the Industrial Finance Branch of the Bank towards enhancement of various credit facilities extended by the Bank to Trident.

In October 1989, the directors and holders of those shares have given an undertaking that as long as the dues of Trident to the Bank are not paid in full, they will not transfer, deal with or dispose off equity or preference shares held by them in the company or any shares that might be acquired in future, without prior written consent of the Bank.

BOBCAPS, in its reply to the show cause notice of SEBI, has submitted that it was the obligation of Trident to give true disclosures and that any punitive action will lie solely against Trident Steels Ltd., its promoters and directors.

Present Status: There are no further communication/queries from SEBI to BOBCAPS in the matter.

The enquiry has been dropped by SEBI.

- (c) The Bank of Baroda had acted as lead managers to the public issue of Kraft Industries Limited ("Kraft") in May 1995. It is alleged that the Managing Director and Promoter of Kraft Industries Ltd. did not possess the qualifications as mentioned in the prospectus filed for raising the funds.

SEBI required from the Bank being merchant banker to the issue, the copies of qualification certificates of the company's Managing Director.

On enquiring, the Managing Director of Kraft Industries Ltd. informed the Bank of having lost the certificates in transit. The bank has replied accordingly to SEBI.

The inquiry is still pending.

Present Status: There are no further communication/queries from SEBI to BOBCAPS in the matter.

- (d) M. S .Shoes East Limited (MS Shoes) came out with a public issue of 17,584,800 zero interest unsecured fully convertible debentures in February 1995. The Bank of Baroda was one of the Lead Managers to the issue with responsibility for post issue management and had underwritten the issue up to ₹ 150,000,000.

After the closure of the issue, MS Shoes complained to the underwriters that some of the cheques accompanying the application for subscription were returned unpaid resulting in the collected amount falling short of the minimum subscription amount. Therefore MS Shoes called upon the underwriters to discharge their underwriting liability to the extent of proportionate devolution and raised a claim on the bank for ₹ 116,665,043 towards devolution of underwriting liability.

The bank declined the claim on the ground that since the issue was declared oversubscribed by the Registrars to the issue no liability can devolve on the Bank under its underwriting commitment.

SEBI has issued an enquiry notice dated July 20, 1995 to the bank, but closed the matter without imposing any penalty on the bank.

Complaint was filed on behalf of MS Shoes, at Vikaspuri Police Station against SBI Capital Markets Limited, the bank, its principal officers including the then CMD and others alleging cheating and breach of trust. The High Court, New Delhi, by order dated December 11, 2000 ordered transfer of the case to Central Bureau of Investigation (CBI).

The investigation by the CBI is still pending.

Present Status: There are no further communication/queries from CBI or SEBI to BOBCAPS in the matter.

The enquiry has been dropped by SEBI.
