I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors

1. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the schemes invests fluctuates, the value of your investment in the schemes may go up or down
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme.
4. UTI-Long Term Advantage Fund – Series III is only the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns. There may be instances where no dividend distribution could be made.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of ₹ 10,000/- made by them towards setting up the Fund.
6. **The present scheme is not a guaranteed or assured return scheme.**
7. Statements/Observations made in this Scheme Information Document are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, dividend and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures.
10. Mutual Funds and securities investments are subject to market risks and the NAVs of the units issued under the scheme may go up or down depending on the factors and forces affecting the capital markets.
11. Risk Factors Specific to Debt Markets

Credit Risk: Bonds /debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit / default risk in view of the sovereign status of the issuer.

Interest-Rate Risk: Bonds/ Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI, the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and the increase or decrease in the level of interest rates. The prices of Bonds/ Government securities

are also influenced by the liquidity in the financial system and/or the open market operations (OMO) by RBI.

Pressure on exchange rate of the rupee may also affect security prices. Such rise and fall in price of bonds/ government securities in the portfolio of the schemes may influence the NAVs under the schemes as and when such changes occur. For a close ended Scheme, where the maturity of the debt securities in the portfolio is in line with the maturity period of the Scheme, the interest rate risk may not be there, if the investment is held upto maturity.

Price Risk: As long as the scheme will be invested, their Net Asset Value (NAV) is exposed to market fluctuations, and their value can go up as well as down. The portfolio of fixed-income securities that the scheme invest in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. In general, price of fixed-income securities go up when interest rates fall, and vice versa.

Market Risk: The scheme may be subject to price volatility due to such factors as interest sensitivity, market perception or the creditworthiness of the issuer and general market liquidity.

Liquidity Risk: The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the schemes might have to incur a significant "impact cost" while transacting large volumes in a particular security. A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Scheme's asset. This may more importantly affect its ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell stocks in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments.

Risks relating to duration: Fixed Income securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.

Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

12. Risk Factors specific to Equity Markets

Stock Market Volatility: Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Different parts of the market can react differently to these developments. The stock-specific volatility may

also change over a period of time as the characteristic of the stock undergoes a change in terms of market cap category.

Equity Price Risk: Stock prices may rise or decline based on a number of factors. These could be a combination of company-specific and system-specific factors. Their impact on different types of stocks may vary. Prices change due to events that impact entire financial markets or industries (for example, changes in inflation, consumer demand, supply situation and GDP growth). Company specific factors may include the likes of success or failure of a new product, mergers, takeovers, earnings announcement and changes in management, to name a few. Securities owned by the Scheme may offer opportunities for growth because of high potential earnings growth; they may also involve greater risks than securities that do not have the same potential.

Dependency Risk: The scheme may invest in stocks and mutual funds and exchange-traded funds linked to stocks. Equity confers a proportionate share of the ownership of a company. Its value will depend on the success of the company's business, income paid to stockholders by way of dividend, the value of the company's assets, quality of its corporate governance practice, its attractiveness relative to peers and general market conditions. The scheme may also invest in convertible securities and warrants. Convertible securities generally are fixed-income securities or preference shares that may be converted into common stock after a prescribed period.

Temporary Investment Risk: If the fund manager is of the view that market or economic conditions may become unfavourable for investors in equities, he may invest a higher proportion of the fund's assets in short-term and medium-term fixed income instruments as well as near-cash equivalents. This may be a defensive and temporary strategy. The fund manager may also adopt such a strategy while zeroing in on appropriate investment opportunities or to maintain liquidity. At times, such investments may lead to lower returns. In these circumstances, the Scheme may be unable to achieve its investment goal.

Non-diversification Risk: The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of one issuer (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the scheme. The Scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Scheme.

Asset-Class Risk: Stocks have historically outpaced other asset classes such as gold, fixed deposits and bonds, to name a few, over the long term in India. Individual stocks prices may, however, tend to rise and decline in a dramatic manner. Such price movement may be due to company-specific aspects or factors such as inflation, interest rates and growth rates that affect the securities market in entirety. A slowdown in growth or a partial or full-blown recession may have a negative impact on prices of most stocks owned by the Scheme.

13. **Money Market Securities** are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

14. The aggregate value of "illiquid securities" of scheme, which are defined by SEBI as non traded, thinly traded and unlisted equity shares, shall not exceed 15% of the total assets of the scheme and any illiquid securities held above 15% of the total assets shall be assigned zero value. The proposed aggregate holding of assets considered "illiquid", could be more than 10% of the value of the net assets of the scheme. In normal course of business, the scheme would be able to make payment of redemption proceeds within 10 business days, as they would have sufficient exposure to liquid assets. In case of the need for exiting from such illiquid instruments in a short period of time, the NAV of the scheme could be impacted adversely.

15. In the event of receipt of inordinately large number of redemption requests or a restructuring of the Schemes' portfolio, there may be delays in the redemption of units.

16. Risk factors & Risk Mitigation under the scheme

a) The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets.

b) Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities.

c) The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

d) Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the equity and equity related investments made by the Scheme which could cause the scheme to miss certain investment opportunities. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The inability of the Scheme to make intended securities purchases due to settlement problems could also cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in a Scheme's portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to

UTI – Long Term Advantage Fund - Series III

the Scheme, in case of a subsequent decline in the value of securities held in a Scheme's portfolio.

- e) Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may choose to invest in unlisted securities that offer attractive yields. This may however increase the risk of the portfolio.
- f) The schemes intend to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the schemes will be subject to credit risk as well as settlement risk, which might affect the liquidity of the schemes.
- g) As redemption is allowed only after a Lock-in-Period of three years, the investor will not be able to take advantage of the opportune moments, if any, during the Lock-in-Period.
- h) Risk associated with close ended equity schemes

A close ended Scheme comes to the end at the scheduled maturity of the Scheme or after a specified Lock-in-Period (namely 3yrs in this scheme). On the scheduled maturity date, all units are redeemed at the NAV on the maturity date. This redemption is done by liquidating the investments irrespective of their levels. Therefore there is risk associated with close ended scheme where fund manager might have to liquidate the investments at unfavourable levels.

Risk Mitigation Measures:

As the said scheme is a close ended Scheme investing in a diversified portfolio the risk factors mentioned above will be minimal.

Interest Rate Risk / Reinvestment Risk: The Scheme would manage the interest rate risk & reinvestment risk by adequately matching the duration of assets in line with the duration of the Scheme.

Credit Risk: Scheme would predominantly invest in highly rated securities where there is an internal credit comfort which would reduce the probability of credit risk.

Portfolio Quality Risk: A pre approved universe of stocks / issuers based on fundamental research is maintained to which helps to mitigate the risk of a poor portfolio quality.

Concentration Risk: The Scheme would have modest presence of issuers with reasonable limits to diversify the portfolio which would mitigate the credit concentration risk as well as sector /stock specific concentration risk.

Liquidity Risk: Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis. a vis. Portfolio Holding) to minimize liquidity risk.

Portfolio Risk: By monitoring the return deviation and adequately managing all the above risks namely

interest rate risk, reinvestment risk & credit cum concentration risk the Scheme would mitigate the overall portfolio risk. Diversification of portfolio will also help to minimize interest rate risk, liquidity risk, portfolio quality risk and overall risks associated with the portfolio.

Investments in Equity and equity related instruments, carry various risks such as inability to sell securities, trading volumes and settlement periods, market risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification and investing in well researched stocks/equity instruments. In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market. The diversification of the portfolio into instruments which are well researched by a robust research team under a strong internal process would be instrumental in mitigating the risks associated.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigates.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Schemes shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the date of closure of the New Fund Offer.

2. Debt and Money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

- Face Value : Stated value of the paper / Principal Amount
- Coupon : Zero; fixed or floating
- Frequency : Semi-annual; annual, sometimes quarterly
- Maturity : Bullet, staggered
- Redemption : FV; premium or discount
- Options : Call/Put
- Issue Price : Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

UTI – Long Term Advantage Fund - Series III

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, CBLOs etc. They are mostly discounted instruments that are issued at a discount to face value.

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

(iii) Regulators: The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of security issuance and eligible investors:

Issuer	Instruments	Yields (as on 20.11.2015)	Maturity	Investors
Central Government	Dated Securities	7.20% - 7.90%	1-30 years	Banks, Insurance Co, PFs, MFs, PDs, Individuals, FPI

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, G-Sec trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in Government Securities owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

D. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme can be invested in any (but not exclusively) of the following instruments.

- * Equity and Equity related instruments including cumulative preference shares and fully convertible debentures and bonds of companies. Investment may also be made in issues of partly convertible debentures/bonds including those issued on rights basis subject to the condition that, as far as possible, the nonconvertible portion of the debentures so acquired or subscribed shall be disinvested within a period of twelve months from their acquisition.
- * Money market instruments as permitted by SEBI and or RBI (including CPs, CDs and CBLOs).
- * Any other instruments as may be permitted by ELSS guidelines from time to time.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The scheme aims to provide long term capital growth by investing in a well diversified portfolio of equity and equity related securities. The portfolio manager proposes to invest in equity and equity related instruments of companies with greater emphasis on individual company metrics driven by in-depth research techniques and employing the full potential of the research team at the AMC. The overlying investment philosophy would be a combination of top down and bottom up approach wherein the objective is to identify and invest in companies that exhibit strong and sustainable growth and are valued at prices which are at a discount or in short do not reflect the growth potential. The micro criterion is to identify the company/ stock based on the combination of business fundamentals, growth prospects, industry scenario, sustainable cash flows and management competence. The portfolio manager at all times will endeavor to build an optimally diversified portfolio to mitigate liquidity and concentration risks.

The fund will also look at stocks that are trading at attractive valuations in relation to earnings or book value or current and/ or future dividends and are available at a price, which can be termed as a relatively undervalued. The quantitative factors/ models for the identification of stocks would include Price to Earnings ratio, Price to Book, Earnings Growth, and Discounted Cash Flow (DCF) model, Return on Equity (RoE), Relative Valuations and Implied Growth amongst others. Apart from the quantitative factors/models to substantiate the financial inputs for stock selection would include qualitative measures such as, return ratios, leverage & earnings quality, management quality amongst others. Also, dependent on the market conditions and within the overall investment objective, the fund would without any capitalization bias invest in either growth or value stocks or both.

Portfolio Turnover Policy:

Portfolio Turnover is defined as the least of purchase or sales as a percentage of average size of a fund during any specified period of time. As sales and purchases of securities can be made on daily basis, it would be difficult to estimate with reasonable level of accuracy the likely turnover in portfolios. There could be instances of churning of portfolio to take advantage of trading opportunity existing in the market. But it would be difficult to set the target for the portfolio turnover as it would be a function of purchases, general market conditions, trading opportunities, creation of liquidity to meet income distribution etc. The portfolio turnover shall be targeted so as to have return maximization for the unitholders. At the same time, expenses such as brokerage and transaction cost shall be kept at low level so that it does not affect the earnings of the Plan.

Bank of Baroda

- (a) Bank of Baroda was one of the bankers to the public issue of shares of Jaltarang Motels Limited (“Jaltarang”). The issue opened for public subscription on December 21, 1995 and closed on December 26, 1995.

The prospectus issued by the Company categorically stated that the company’s shares would be listed on the stock exchanges at Ahmedabad and Bombay but permission for listing could be obtained only from Ahmedabad Stock Exchange (ASE).

While ASE accorded approval on March 4, 1996, Bombay Stock Exchange (BSE) rejected the request of the company (Jaltarang) for listing of shares. However, the Bank (Bank of Baroda), on March 25, 1996 transferred a sum of ₹ 38,89,218/- collected from the public, to the company’s (Jaltarang) account.

Since BSE had refused to list the company’s shares, the public issue became void in terms of section 73 of the Companies Act necessitating refund of the application money forthwith to the applicants.

The matter came to the notice of SEBI. To protect the interest of applicants SEBI, after holding an inquiry, by its order dated January 19, 2000 directed the bank to refund the sum of ₹ 4,031,018/- being the application money with interest at 15% from March 25, 1996 i.e. the day the bank allowed withdrawal of the funds by Jaltarang in respect of funds collected from the public issue.

The Bank preferred an appeal before the Securities Appellate Tribunal against the aforesaid order of SEBI. The tribunal, by its order dated July 27, 2000, rejected the appeal of the Bank. On which the bank filed an appeal (Appeal No.2 of 2000) before the High Court, Mumbai against the said order of the Tribunal. The High Court, Mumbai, on November 13, 2000, granted interim relief of stay of the operation of the orders dated July 27, 2000 of the Securities Appellate Tribunal and January 19, 2000 of SEBI and has further directed that the matter be placed on the board for final hearing.

Present Status: The matter is still pending with High Court Mumbai.

There are no further communication/queries from any regulatory authority to BOBCAPS in the matter.

- (b) The merchant banking division of the Bank of Baroda was the pre-issue lead manager for the public issue of shares of Trident Steels Limited (“Trident”) in November, 1993.

SEBI issued a show cause notice dated April 29, 2004 calling upon the merchant banking division of the Bank to show cause why action should not be taken against it for failing in its duty to exercise due diligence in the above mentioned public issue. SEBI alleged that the merchant banking division of the Bank did not disclose the material fact that 750,000 shares out of the pre issue capital of Trident had been pledged by the directors and shareholders of those shares to the Industrial Finance Branch of the Bank towards enhancement of various credit facilities extended by the Bank to Trident.

In October 1989, the directors and holders of those shares have given an undertaking that as long as the dues of Trident to the Bank are not paid in full, they will not transfer, deal with or dispose off equity or preference shares held by them in the company or any shares that might be acquired in future, without prior written consent of the Bank.

BOBCAPS, in its reply to the show cause notice of SEBI, has submitted that it was the obligation of Trident to give true disclosures and that any punitive action will lie solely against Trident Steels Ltd., its promoters and directors.

Present Status: There are no further communication/queries from SEBI to BOBCAPS in the matter.

The enquiry has been dropped by SEBI.

- (c) The Bank of Baroda had acted as lead managers to the public issue of Kraft Industries Limited (“Kraft”) in May 1995. It is alleged that the Managing Director and Promoter of Kraft Industries Ltd. did not possess the qualifications as mentioned in the prospectus filed for raising the funds.

SEBI required from the Bank being merchant banker to the issue, the copies of qualification certificates of the company’s Managing Director.

On enquiring, the Managing Director of Kraft Industries Ltd. informed the Bank of having lost the certificates in transit. The bank has replied accordingly to SEBI.

The inquiry is still pending.

Present Status: There are no further communication/queries from SEBI to BOBCAPS in the matter.

UTI – Long Term Advantage Fund - Series III

- (d) M. S. Shoes East Limited (MS Shoes) came out with a public issue of 17,584,800 zero interest unsecured fully convertible debentures in February 1995. The Bank of Baroda was one of the Lead Managers to the issue with responsibility for post issue management and had underwritten the issue up to ₹ 150,000,000.

After the closure of the issue, MS Shoes complained to the underwriters that some of the cheques accompanying the application for subscription were returned unpaid resulting in the collected amount falling short of the minimum subscription amount. Therefore MS Shoes called upon the underwriters to discharge their underwriting liability to the extent of proportionate devolution and raised a claim on the bank for ₹ 116,665,043 towards devolution of underwriting liability.

The bank declined the claim on the ground that since the issue was declared oversubscribed by the Registrars to the issue no liability can devolve on the Bank under its underwriting commitment.

SEBI has issued an enquiry notice dated July 20, 1995 to the bank, but closed the matter without imposing any penalty on the bank.

Complaint was filed on behalf of MS Shoes, at Vikaspuri Police Station against SBI Capital Markets Limited, the bank, its principal officers including the then CMD and others alleging cheating and breach of trust. The High Court, New Delhi, by order dated December 11, 2000 ordered transfer of the case to Central Bureau of Investigation (CBI).

The investigation by the CBI is still pending.

Present Status: There are no further communication/queries from CBI or SEBI to BOBCAPS in the matter.

The enquiry has been dropped by SEBI.
